1. INTRODUCTION

O'Connor Sutton Cronin & Associates (OCSC) have been commissioned to undertake this assessment with respect to the Proposed Strategic Housing Development at Blackglan Road, Sandyford, Dublin 18. The exact site location can be seen in Figure 1 below.

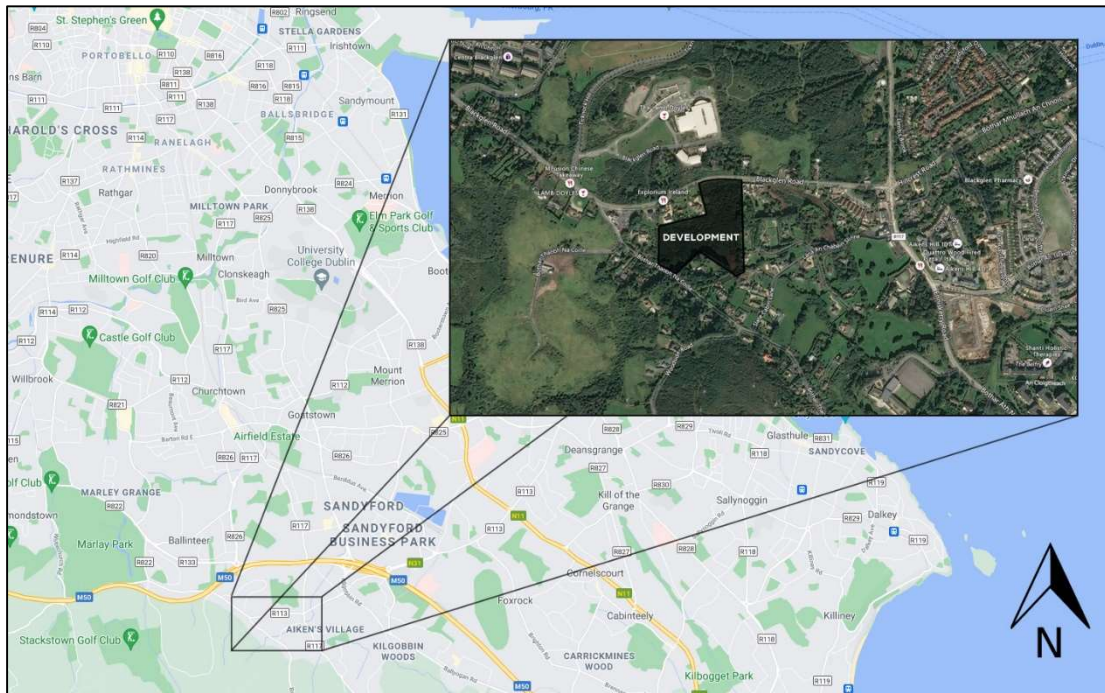

Figure 1: Site Location Map

The site is bounded by residential properties to the east & west, Blackglan Road to the north, and Woodside Road to the south.

Zolbury Limited intend to apply to An Bord Pleanála for planning permission for a Strategic Housing Development on a site of c. 3.7 ha at Blackglan Road and Woodside Road, Sandyford, Dublin 18. The development shall consist of a new residential scheme comprising 360 no. residential units, associated resident amenity facilities and a childcare facility in the form of 9 no. new apartment buildings (A1 – C3) as follows:

- Block A1 (4 storeys) comprising 18 no. apartments (3 no. 1 bed units and 15 no. 2 bed units); a crèche facility of approx. 401 sq. m with

associated outdoor play space of approx. 20 sq. m; and resident amenity facilities of approx. 30 sq. m.

- Block A2 (3-4 storeys) comprising 24 no. apartments (2 no. 1 bed units and 22 no. 2 bed units) and resident amenity facilities of approx. 390m².
- Blocks B1 and B2 (2-6 storeys) comprising 69 no. apartments (30 no. 1 bed units, 34 no. 2 bed units, 5 no. 3 bed units).
- Blocks B3 and B4 (2-6 storeys) comprising 62 no. apartments (30 no. 1 bed units, 27 no. 2 bed units and 5 no. 3 bed units).
- Blocks C1, C2 and C3 (3-6 storeys) comprising 187 no. apartments (58 no. 1 bed units, 126 no. 2 bed units and 3 no. 3 bed units); and resident amenity facilities of approx. 187.5 sq. m.

Each residential unit is afforded with associated private open space in the form of a terrace / balcony.

Total Open space (approx. 22,033 sq. m) is proposed in the form of public open space (approx. 17,025 sq. m), and residential communal open space (approx. 5,008 sq. m).

Podium level / basement level areas are proposed adjacent to / below Blocks A2, B1, B2, B3, B4, C1, C2 and C3 (approx. 12,733 sq. m GFA). A total of 419 no. car parking spaces (319 no. at podium/basement level and 100 no. at surface level); to include 80 no. electric power points and 26 no. accessible parking spaces); and 970 no. bicycle spaces (740 no. long term and 230 no. short term), and 19 no. Motorcycle spaces are proposed. 10 no. car spaces for creche use are proposed at surface level.

Vehicular/pedestrian and cyclist access to the development will be provided via Blackglen Road to tie in with the Blackglen Road Improvement Scheme. A second access is also proposed via Woodside Road for emergency vehicles, pedestrian and cyclist access only.

The proposal also provides for Bin Storage areas and 4 No. ESBN substations to supply the development. 3 no. sub-stations shall be

integrated within the building structures of Blocks B and Blocks C. In addition, one Sub-station shall be classed as a unit sub-station mounted externally on a dedicated plinth.

The associated site and infrastructural works include provision for water services; foul and surface water drainage and connections; attenuation proposals; permeable paving; all landscaping works; green roofs; boundary treatment; internal roads and footpaths; electrical services; and all associated site development works.

The purpose of this report is to provide a detailed and conservative assessment of the development proposals and the potential traffic impact on the operation of the local road network.

In carrying out the above, this assessment has given due consideration to the relevant guidelines including:

- *Traffic & Transport Assessment Guidelines (2014)* as published by the former National Roads Authority (NRA) now Transport Infrastructure Ireland (TII);
- *Guidelines for Traffic Impact Assessment (1997)* as published by the Chartered Institute of Highways & Transportation;

Furthermore, the following documents have also been considered for this assessment:

- *Design Manual for Urban Roads and Streets*
- *Sustainable Urban Housing: Design Standards for New Apartments*
- *Greater Dublin Area Cycle Network Plan 2013*
- *BusConnects – New Dublin Area Bus Network Summary Report*
- *DLR County Development Plan 2022 - 2028*

2. STUDY METHODOLOGY

At the time of writing, the ongoing Covid 19 pandemic and associated restrictions have had a significant impact on traffic and travel patterns across the country. As a result, procurement of new survey data which would be a true reflection of typical traffic levels has not been possible. The only available survey data which was able to be procured ranges from 2017 to 2019. The use of this survey data combined with TII traffic growth factors to account for any background traffic increase in the interim is considered to give the most accurate representation possible of the typical traffic levels experienced within the study area. This is standard practice should more recent survey data not be available, and usually provides a more conservative result than updated data.

The traffic surveys were completed by IDASO Innovative Data Solutions at the following locations:

- Junction 1: Kellystown Road/Harolds Grange Road/ College Road Signalised Junction;
- Junction 2: Blackglen Road/Ticknock Road Priority Junction;
- Junction 3: R113 Blackglen Road/Woodside Road Priority Junction;
- Junction 4: Enniskerry Road/Hillcrest Road/Blackglen Road Signalised Junction;
- Junction 5: Leopardstown Road/Kilgobbin Road/Hillcrest Road Signalised Junction.

The exact locations of these junctions are highlighted in Figure 2 below.

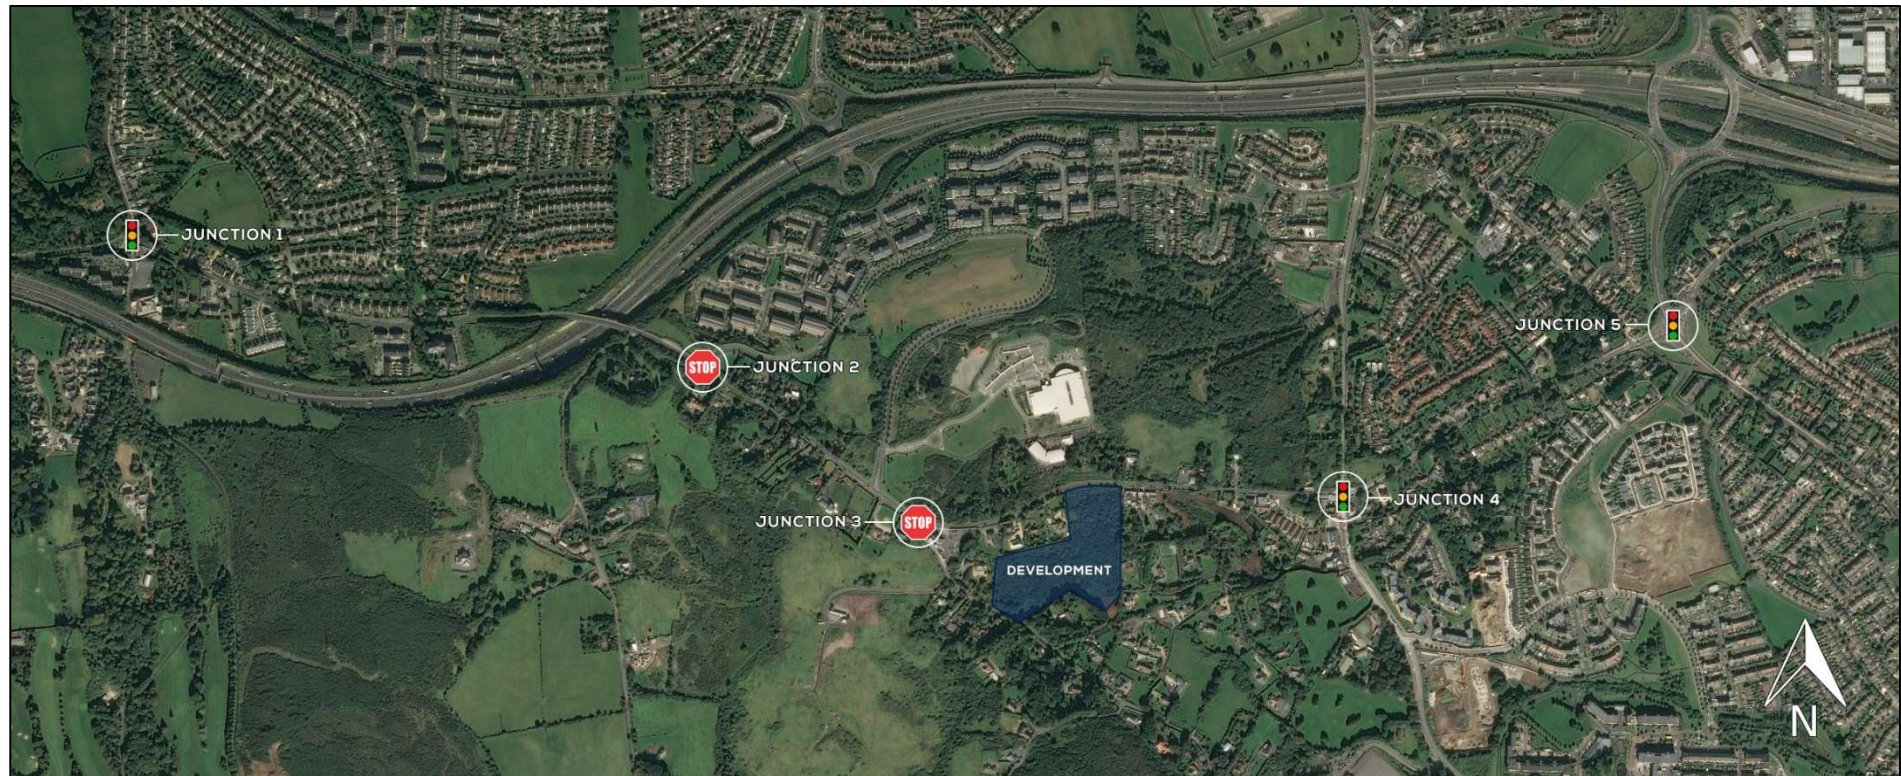

Figure 2: Study Area & Traffic Survey Locations

The surveys were carried out on the following days:

- Junction 1: Tuesday, 28 March 2017;
- Junction 2: Thursday, 7 November 2019;
- Junction 3-4: Tuesday, 18 June 2019;
- Junction 5: Tuesday, 24 July 2018.

Due to COVID-19 restrictions, it was not feasible to do any new surveys at ideal dates. The only available data which could be used is historical counts sourced from IDASO.

The surveys were done in 15-minute interval junction turning counts carried out between the hours of 07:00 – 19:00.

An eight-fold classification system was used which recorded cyclists, motorcycles, cars, taxis, light goods vehicles, two classes of other goods vehicles and buses.

The junction surveys also included:

- Queue length surveys which recorded the maximum queue lengths observed on a per lane basis at each approach of each junction over 15-minute intervals;
- Pedestrian crossing counts at each arm of each junction over 15-minute intervals.

A full copy of the results of all traffic surveys can be found in *Appendix A*, attached to this report.

The short-term traffic counts were expanded to Annual Average Daily Traffic (AADT) using expansion factors¹ from TII. The base year flows were then

¹ Project Appraisal Guidelines for National Roads Unit 16.1 - Expansion Factors for Short Period Traffic Counts, TII (October 2016)

adjusted to the predicted Year of Opening for the development (2024) and the Design Year (2039) using medium-range TII growth factors². This is conservative as traffic growth estimates are directly influenced by projections for economic activity which are now unlikely to be realised due to the impact of the global pandemic while commuter patterns are also expected to be permanently impacted.

The traffic generation potential of the subject site was then assessed using the Trics³ planning database. This database contains information on thousands of sites in Ireland and the U.K. and can be used to predict the traffic that will be generated by numerous types of development.

The estimated additional traffic was assigned to the local road network and its impact on the operation of the local links and junctions was assessed using guidance from TII, Dun Laoghaire Rathdown County Council, and the *Design Manual for Roads and Bridges* (DMRB) and Transyt 15 traffic modelling software.

The assessment considered the following scenarios:

- Do Nothing – Allowance for natural background traffic growth only;
- Do Something – Allowance for natural background traffic growth and the additional trips estimated to be generated by the proposed development.

² Project Appraisal Guidelines for National Roads Unit 5.3 - Travel Demand Projections, TII (May 2019)

³ Trip Rate Information Computer System

3. THE RECEIVING ENVIRONMENT

The receiving environment is urban in nature. The existing primary artery through the study area is Blackglen Road (R113), which is also the road on which access will be provided for the development.

Blackglen Road is earmarked to be improved, with the contract being awarded to Murphy International Limited on 24 August 2021. The road map for this upgrade is shown below:

- Autumn 2021: Construction contract commenced – 18-month contract period;
- Spring 2022: Junction improvement works at Grange Road/Harold's Grange Road/College Road/Kellystown Road to be completed;
- Spring 2024: Construction works completed.

Outside of the study area, development-generated traffic will dissipate considerably and so is expected to have a negligible impact on the operation of the wider network. While there is substantial variation in the type of traffic travelling on the links locally, during the peak travel hours, they would primarily be expected to carry commuter traffic.

EXISTING PUBLIC TRANSPORT, CYCLE & PEDESTRIAN FACILITIES

The site is located in close proximity to a number of public transport services including both rail and bus as discussed following.

RAIL

The northern boundary of the site is located approximately 1.9km (27 min) walk, 9 min cycle) from Glencairn Train Station (Green Luas Line). This station provides access to Brides Glen in the east, and Broombridge in the north. This forms part of the wider Luas network throughout the Greater Dublin Area and links the site directly to Dublin City Centre and the Red Luas, as set out in the following figure.

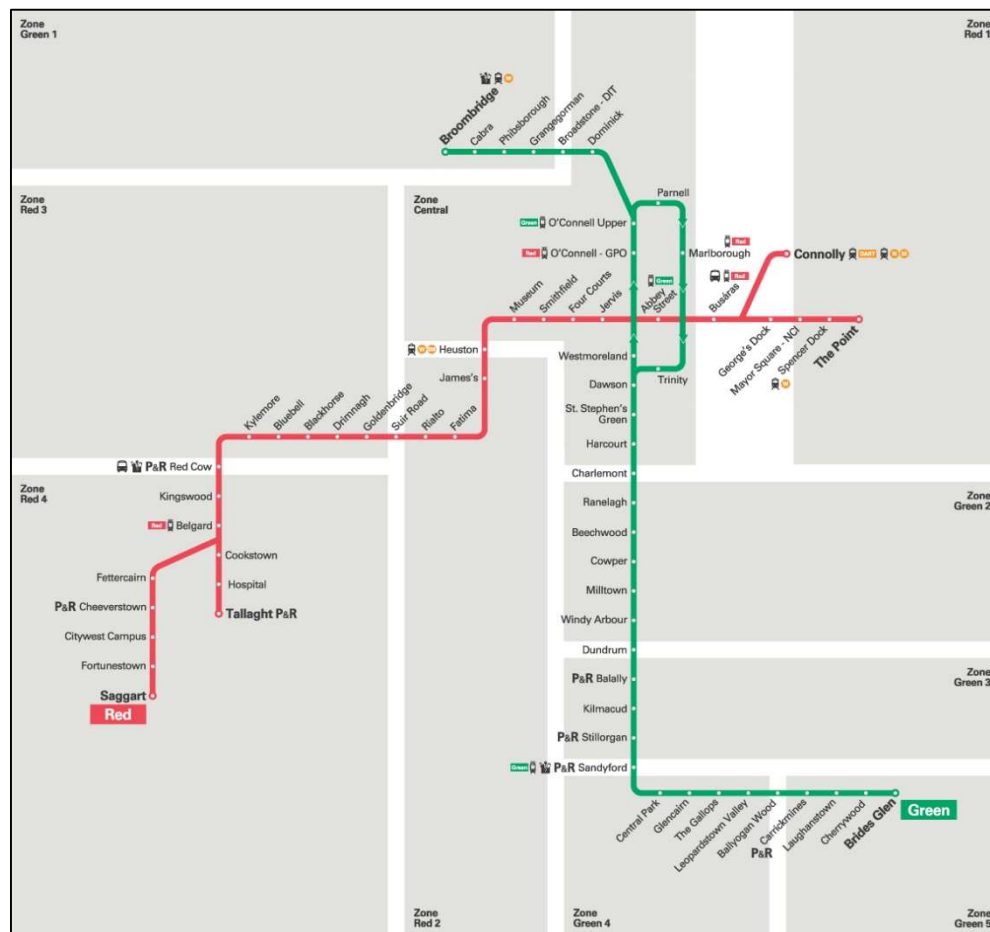

Figure 3: Luas Map⁴

The frequency of the Luas Green Line at the Glencairn Station is shown in the tables below:

Day	Min	Avg	Max
05:44 – 07:00	10	16	20
07:00 – 10:00	6	9	14
10:00 – 16:00	12	13	14
16:00 – 19:00	6	10	16
19:00 – 00:14	12	13	15

Table 1: Glencairn Luas Frequency - Monday – Friday

⁴ Source: www.luas.ie/map

Day	Min	Avg	Max
06:44 – 7:00	15	16	20
10:00 – 16:00	14	14	15
16:00 – 19:00	14	14	14
19:00 – 00:14	7	14	15

Table 2: Glencairn Luas Frequency - Saturday

Day	Min	Avg	Max
07:14 – 12:00	12	14	20
12:00 – 19:00	12	12	12
19:00 – 23:14	12	13	15

Table 3: Glencairn Luas Frequency – Sunday & Bank Holidays

BUS

The northern boundary of the site is located approximately 120m (2-minute walk, 1 min cycle) from the nearest bus stop, Blackglen Court Stop 3533 east and stop 3494 west, which is served by Dublin Bus Service No. 44B and Go ahead service 114.

These services operate during peak hours, every 30 mins, and provide connections to the following nearby urban centres. Dublin Bus 44b provides a connection between the Dundrum Luas Station, Dundrum, Sandyford and Glencullen. Go Ahead service 114 provides access to Blackrock Station, Stillorgan Road, Ravenscourt Park and Rockview.

Neither bus route currently provides connections to the city centre. It is noted that BusConnects' plan for the area includes the introduction of bus services 86, 87, 88 and L33. Although these services will provide connections to the city centre, they are not expected to be "high frequency". These routes are discussed in more detail in the BusConnects section of this report.

CYCLING AND WALKING

The local cycle facilities within DLR currently consist of Radial and Orbital Cycle Routes, which span most of the county. The radial routes mainly service north-south movements, while the orbital routes service east-west movements. The closest connection with the DLR cycle route is on the R117, which is approximately 450m (1 min cycle) from the northern boundary of the site. A map of the cycle routes within the county is shown in Figure 4.

Currently, there is no pedestrian infrastructure present along Blackglen Road. It should be noted that the Blackglen Road Improvement Scheme will improve walking and cycling infrastructure in the immediate vicinity. This is discussed in more detail in Section 4. This will significantly improve accessibility for this development.

Two isochrone maps were prepared to indicate the proximity of the development to public transport points in terms of walking and cycling. The proximities are colour coded with green indicating areas within 10 minutes, the orange area within 20 minutes and red areas within 30 minutes of the development. These two isochrone maps are shown in Figure 5 and Figure 6.

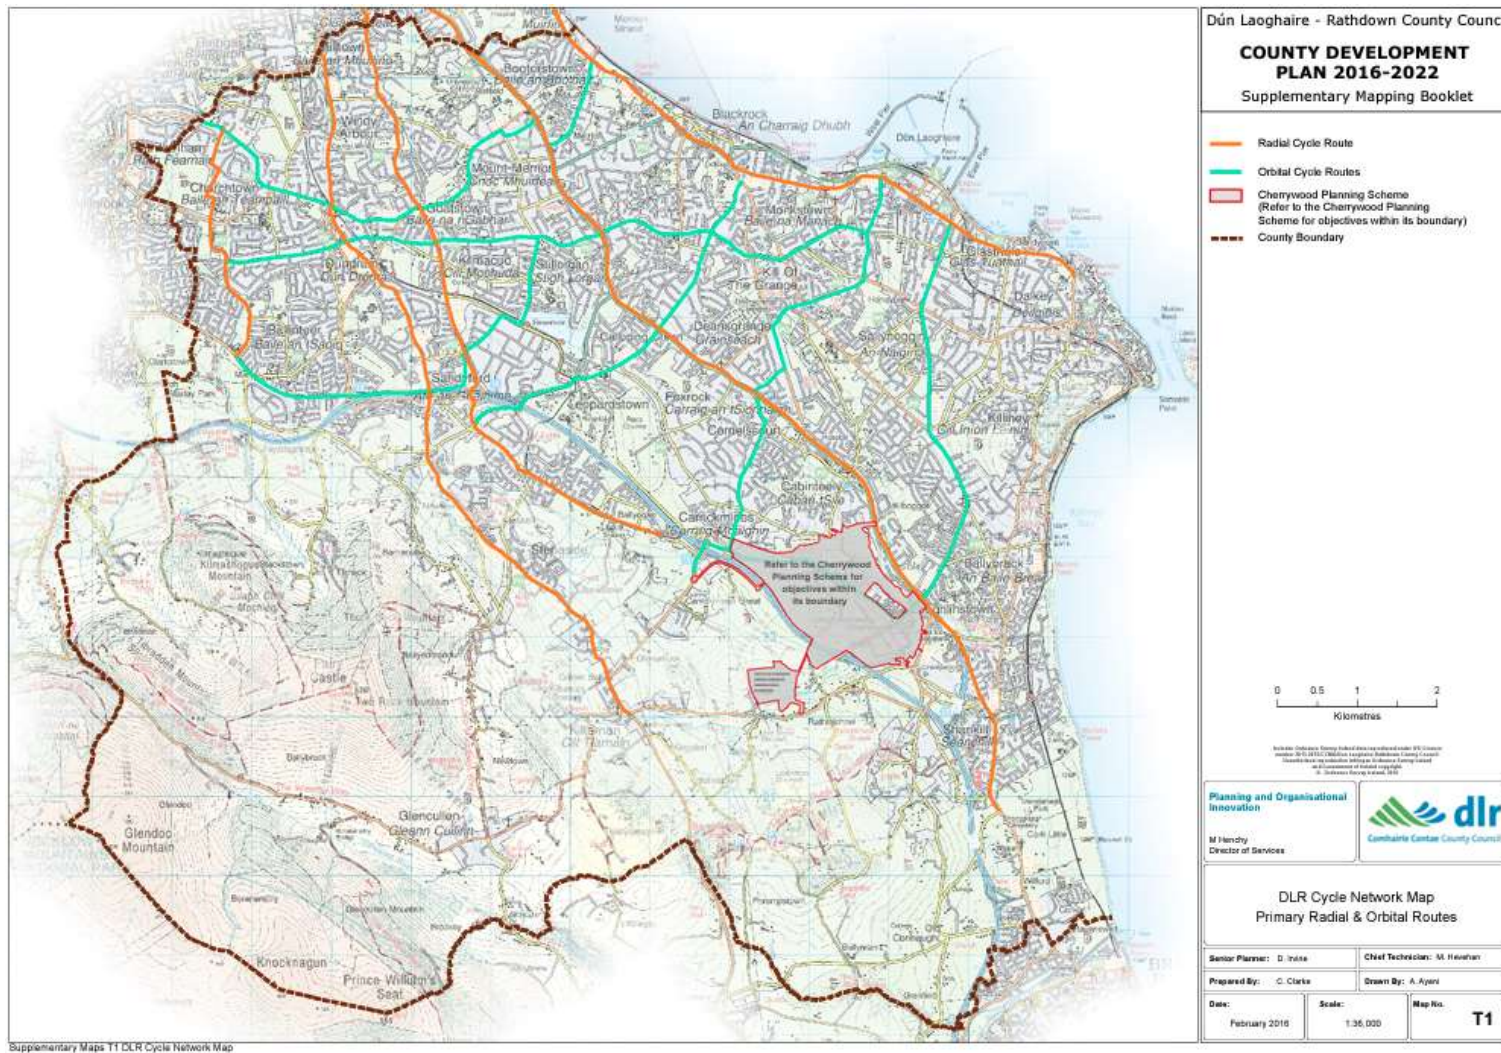

Figure 4: DLR Cycle Network Map - Primary Radial & Orbital Routes (source: dlrcoco.ie)

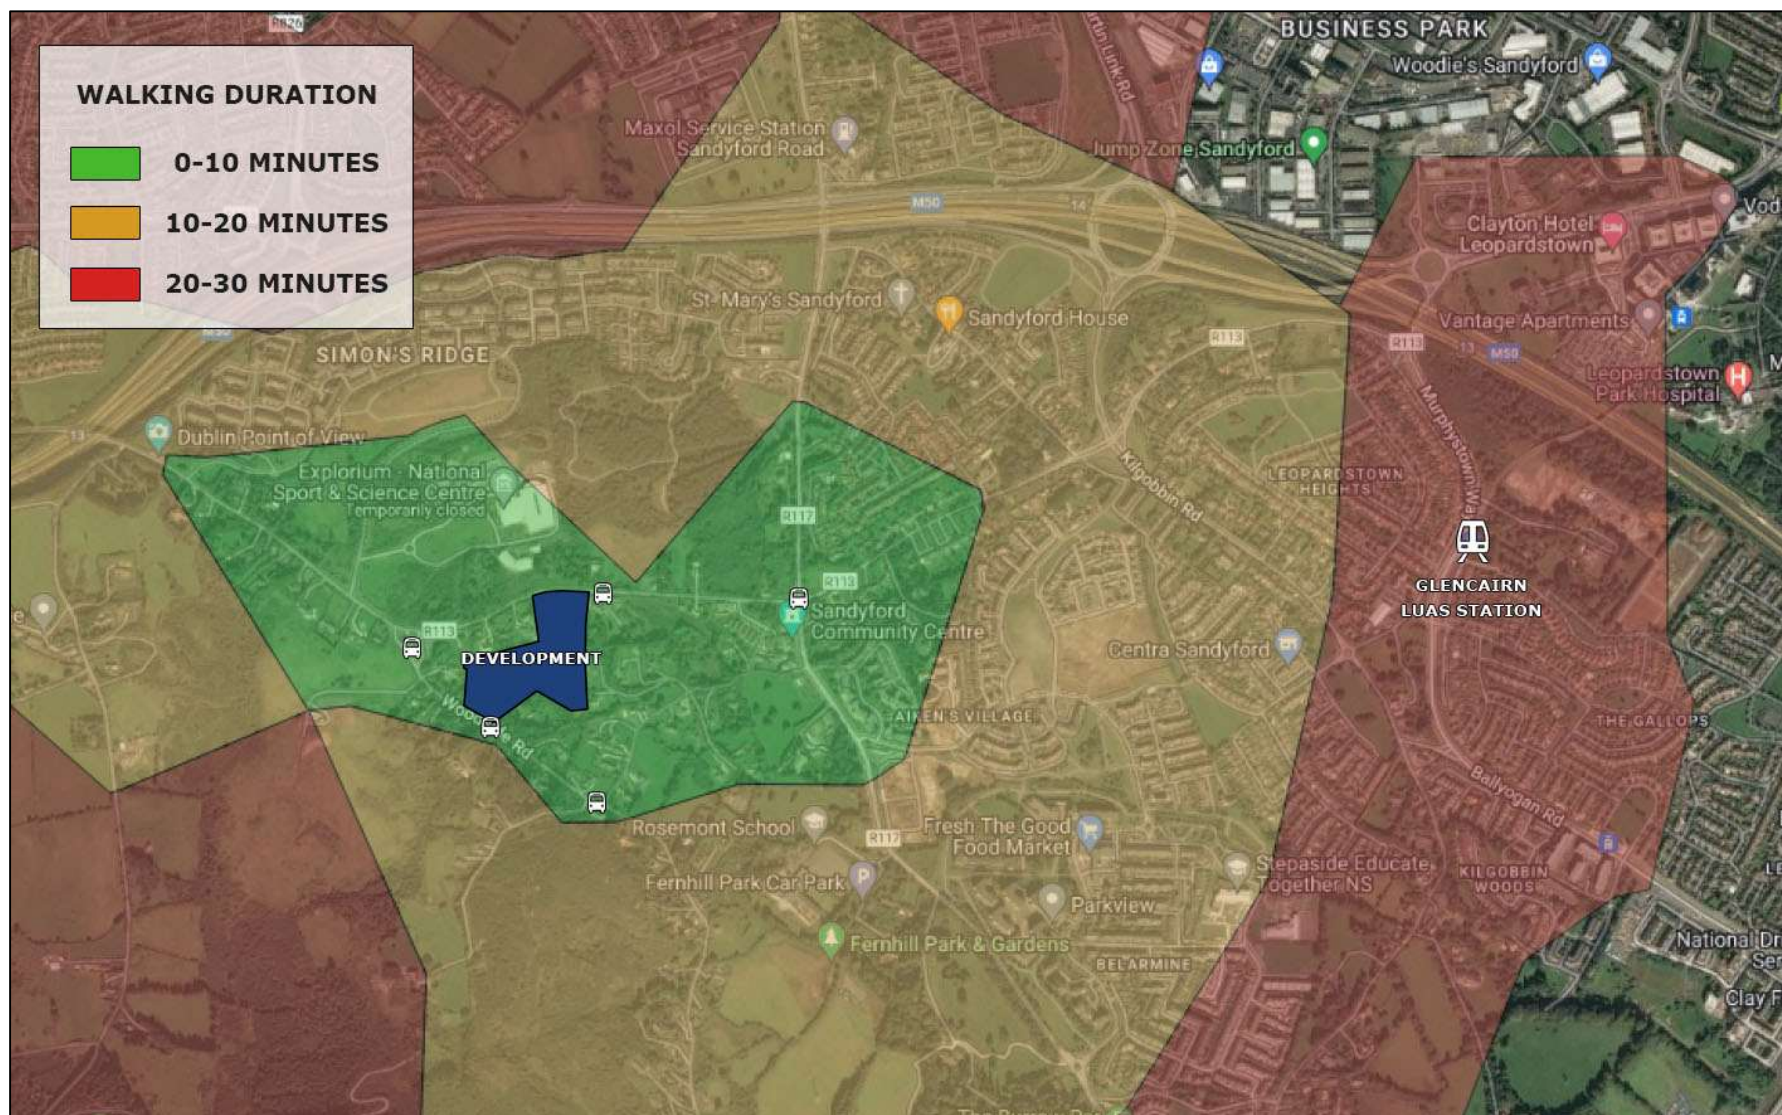

Figure 5: Walking Isochrone Map

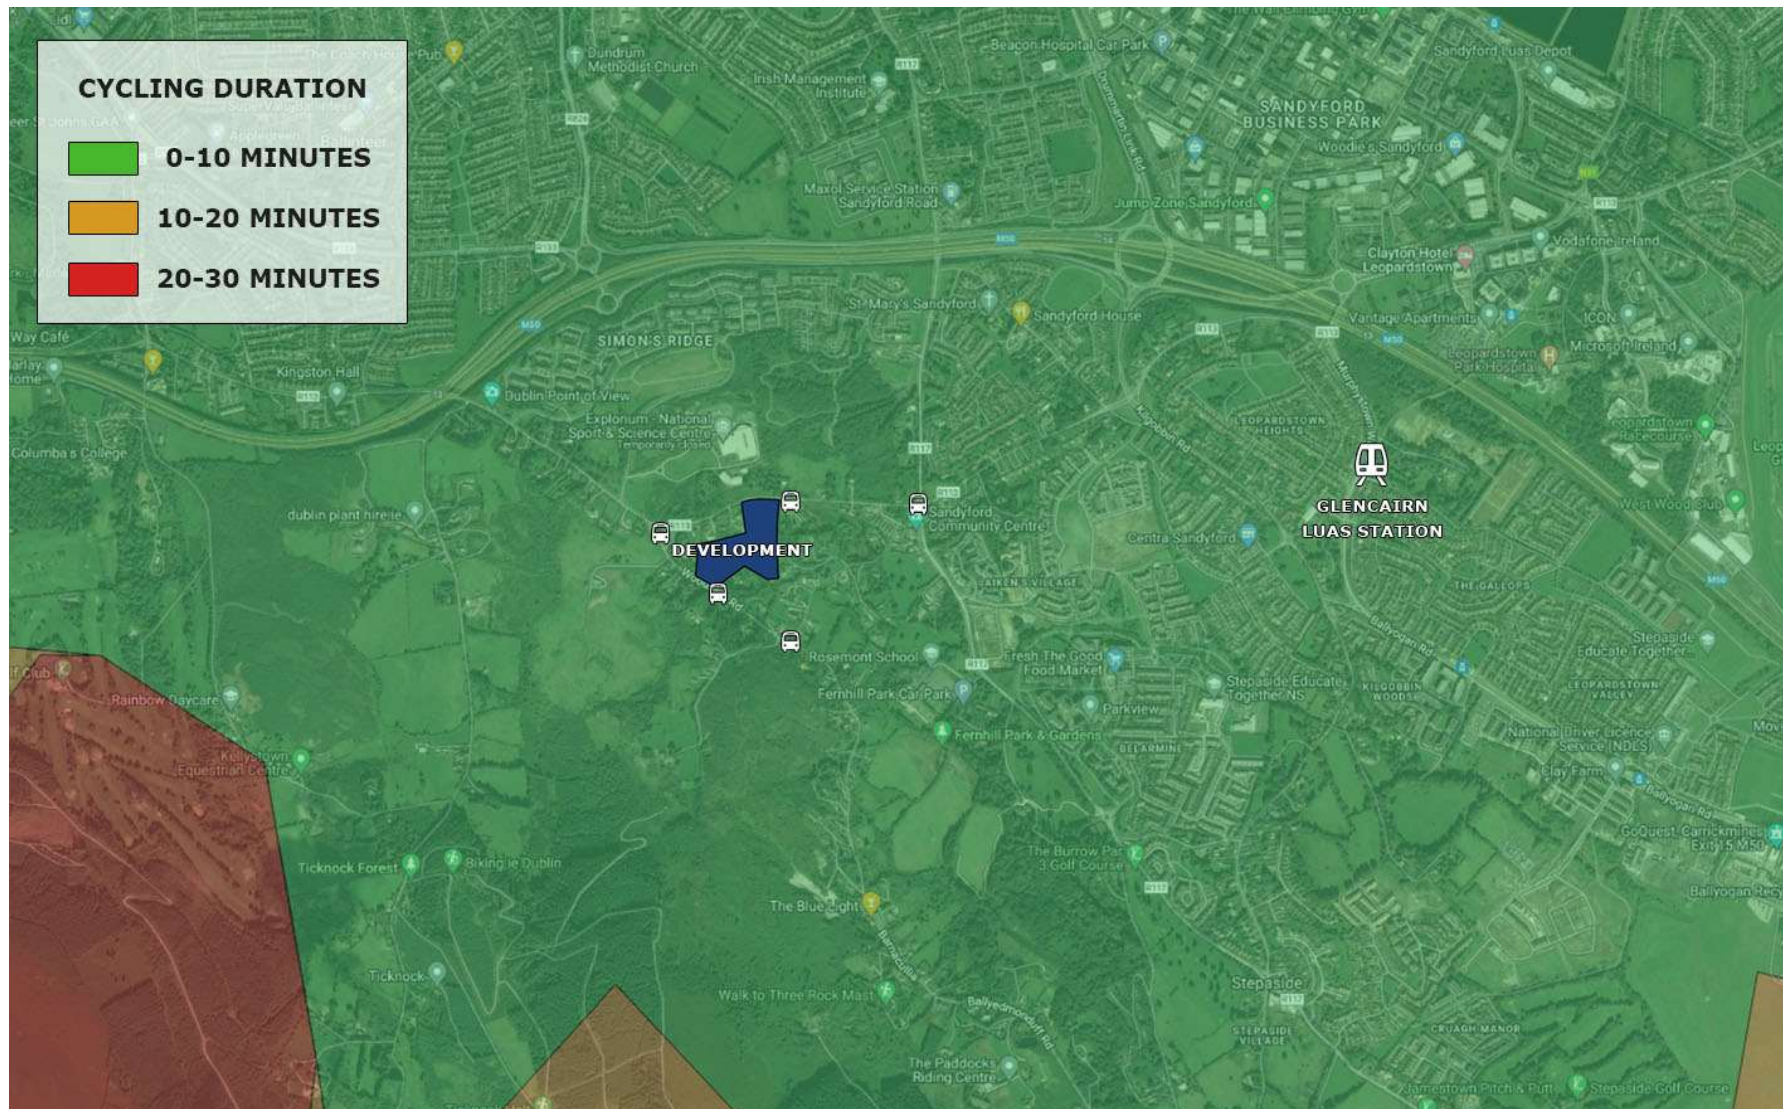

Figure 6: Cycling Isochrone Map

CAPACITY OF EXISTING PUBLIC TRANSPORT

The Glencairn Luas Stop was visited to determine the available capacity for this service. This was done on a Thursday 7 April 2022, during the morning peak period (8:00 – 9:00). Three trips were done from this stop, northbound towards the City.

The observations from this exercise indicated that there was ample spare seating, as well as standing space available for commuters. Photos were taken during this visit to illustrate the available capacity.

Figure 7: Glencairn Stop Capacity AM Peak

Figure 8: Glencairn Stop Capacity AM Peak

Figure 9: Glencairn Stop Capacity AM Peak

Furthermore, TII was contacted to source information on the demand at this stop. Surveys were conducted on a Thursday, Saturday, and Sunday in November 2019, which means that the data is pre-Covid.

The daily frequency of services at this stop is on average, in the northbound direction, 61 on a weekday, 58 on Saturday and 39 on Sunday. While the southbound direction provides 57 during a weekday, 58 on Saturday and 39 on Sunday. This means that in total, 118 services are provided on a weekday, 116 on Saturdays and 78 on Sundays. This data was sourced from the Luas website (luas.ie).

According to the Luas Green Line – Peak hour capacity requirements south of Charlemont document by MetroLink and TII, this section of the Luas Line uses a combination of Citadis 402 trams and Citadis 502 trams. These trams have capacities of 319 passengers and 408 passengers respectively. Assuming that the same is true for the Glencairn stop, an average capacity of 364 passengers is assumed per service.

This means that the following capacity assumptions can be made for this stop:

Day	No. Services & Capacity	
Weekday	118	42 952
Saturday	116	42 224
Sunday	78	28 392

Table 4: Glencairn Luas Stop Capacity

The total boarding and alighting figures obtained from TII result in the following demand percentages at the stop:

- Weekday: 6.48%
- Saturday: 4.95%
- Sunday: 5.71%

From the above, it is evident that the demand at the station is low compared to the capacity. This fact, combined with observations from the site visit indicates that there is ample spare capacity available to accommodate residents from this development on public transport services.

FUTURE PUBLIC TRANSPORT, CYCLE & PEDESTRIAN FACILITIES

There are a number of proposals which will further enhance the sustainable transport infrastructure serving the site, be it directly or indirectly. These are discussed in further detail below.

BLACKGLEN ROAD UPGRADE

DLR County Council is currently busy with road upgrades along Blackglen Road. The improvement entails the upgrade of 2.02 km of road, and includes the following transport infrastructure-related items:

- Construction of pavement, footpaths and cycle lanes which are currently not present along Blackglen Road;
- Upgrading of existing signalized junctions at Lambs Cross and Grange Road/Harold's Grange Road/Kellystown Road/College Road and new toucan crossing on Blackglen Road;
- Upgrading of bus stops on Blackglen Road, Sandyford Road and Enniskerry Road;

The extent of road improvements planned along this road is shown in the figure overleaf.

Specific to this site, walkways and cycle lanes will be added to both sides of the road adjacent to the site frontage. These upgrades will tie into the larger network and provide access to a variety of public transport services, including bus routes and the Luas Green Line.

Figure 10: Blackglen Road Upgrade Scheme

BUSCONNECTS

With the planned implementation of the BusConnects network, additional routes will be added in the vicinity of the development. These are:

Other City Bound Routes:

- Route 86: Ticknock – Goatstown – Mountjoy Square
- Route 87: Belarmine – Dundrum – Mountjoy Square
- Route 88: Enniskerry – Belarmine – Dundrum – Mountjoy Square

Local Routes

- Route L33: Glencullen - Dundrum

Orbital Routes

- Route S8: Tallaght – Sandyford – Dún Laoghaire

The extent of these routes relative to the site location is shown in the figure below:

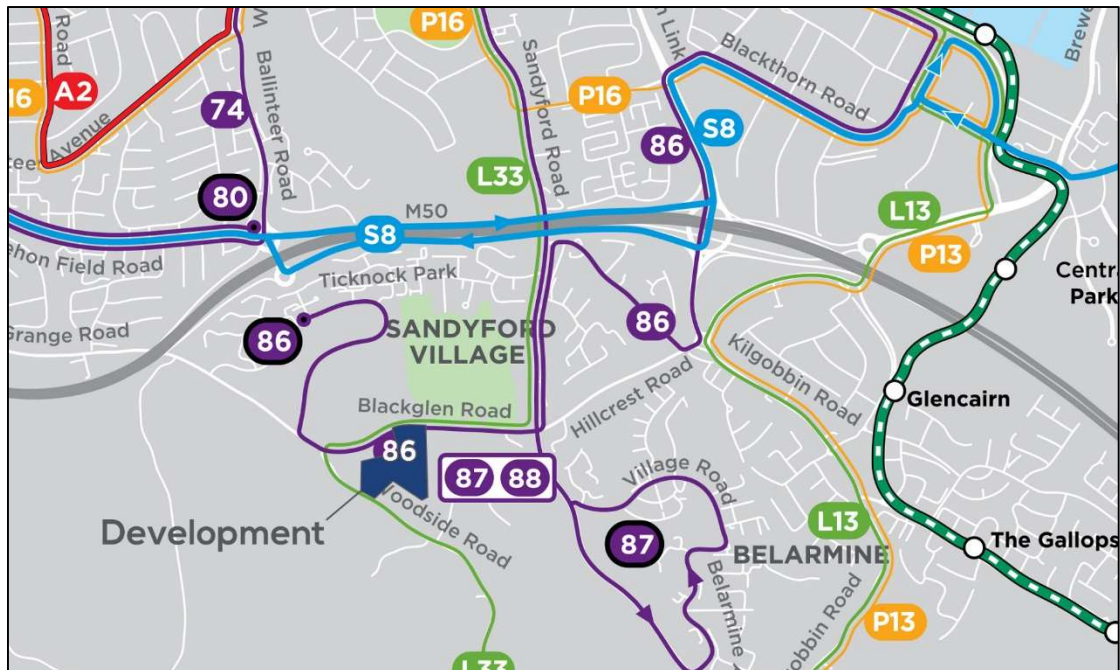

Figure 11: Location of Planned BusConnects Routes relative to Development

The planned frequency of these routes is shown in the table below:

Route	Peak	
	Weekday (mins)	Weekend (mins)
86	30	30
87	60	60
88	60	60
L33	60	-
S8	15	30

Table 5: Peak Time Frequency of Routes

From the above table, it can be surmised that in the vicinity of the development, a total of 5 local BusConnects services will be added to the area and replace the existing routes (44B & 114) during peak hours. This addition will significantly increase access to main areas from the development. It should be noted that these three City Bound Routes will also connect with the Luas Station at Glencairn.

Additional to this, the Orbital Route will add another 4 services within peak hours. This service will offer enhanced access to and from the area of the development and the coast, although it should be noted that the closest bus stop for this route is likely to be outside of a comfortable walking distance. This could potentially change should pedestrian access to this route be added through the Ticknock Park area. This would create a 1.5km (17-minute) walk from the development to this stop. However, at this stage, it is unclear if such an addition is planned.

RAIL

The only projected rail-related upgrade discussed in the County Development Plan is the progression of the development of the Blue Line Bus Rapid Transit Service, which will link the DART line at Sydney Parade Avenue to Sandyford/Dundrum Town Centre. This will provide integration between DART, bus and Luas services.

CYCLING/ WALKING

According to the County Development Plan, the Council has the following cycling and walking-related upgrades planned for implementation:

Six-year objectives Cycling and Walking:

- Leopardstown Link Road from South County Business Park;
- E.S.B. Roundabout on Leopardstown Road to Arena Road and Blackthorn Road;
- Leopardstown Roundabout Re-configuration to a signalized junction;
- Sandyford Pedestrian and Cycle Bridge, linking Kilgobbin Road to the Drummartin Link Road on the west side of the M50 junction 13.

Long-term objectives Cycling and Walking:

- Central Park to South County Business Link Road;
- Blackthorn Drive/Drummartin Link Road Grade Separation;
- Murphystown Road, over the M50 Motorway, to Central Park and South County Business Park;
- Cycle/pedestrian link, via the exiting, M50 access bridge, from Ballyogan Road into Horse Racing Ireland property and connecting Central Park and South Country Business Park.

The planned upgrades are shown in Figure 12.

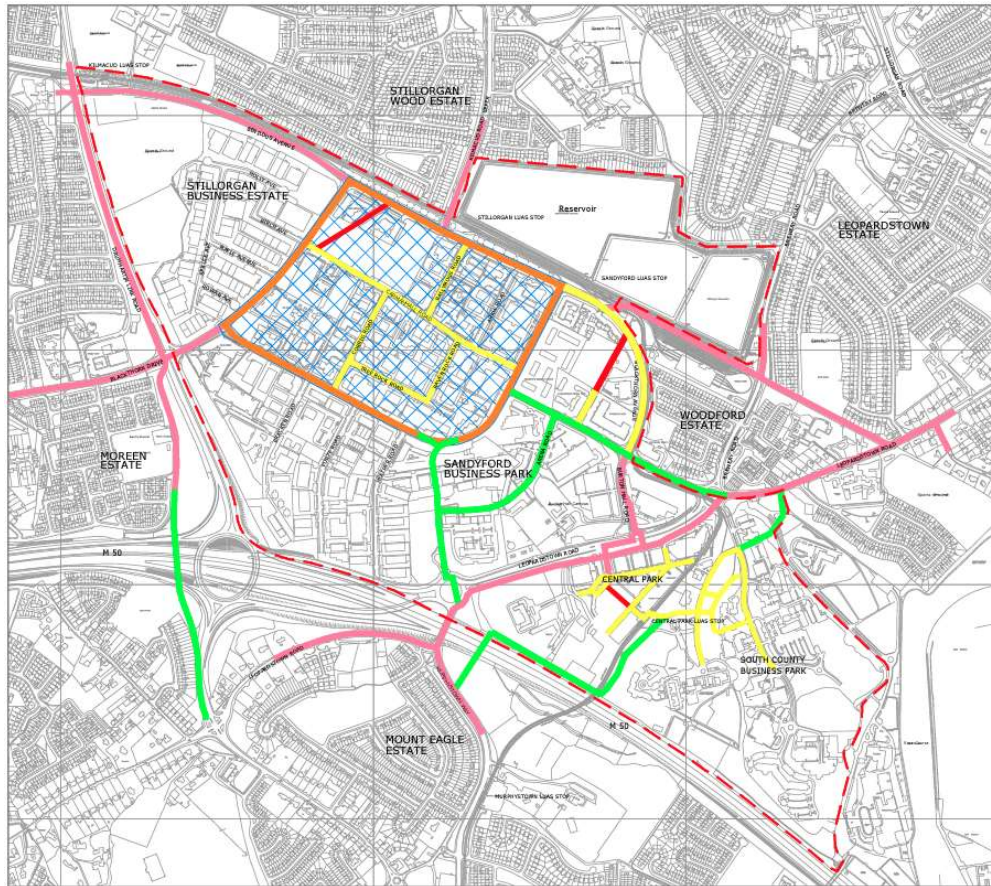

Figure 12: Walking & Cycling Routes (source: dlrcoco.ie)

The Council also plans to improve permeability and connectivity within the Sandyford Business District by creating a low-speed environment for cyclists and pedestrians, and by implementing circulation routes and traffic management measures. This should promote the use of non-motorised transport.

LINK CAPACITY

As noted earlier, base traffic levels have been surveyed on the local network between 2017 and 2019. By combining these base flows with the traffic generation estimates for the proposed development, the following peaks were identified:

- A.M. Peak Hour: 08:00 – 09:00;
- P.M. Peak Hour: 17:00 – 18:00.

The recorded flows during the above peak hours and across the course of an average day are shown in the following:

- Diagram 1: 2019 A.M. Peak Hour Base Flows (08:00 – 09:00);
- Diagram 2: 2019 P.M. Peak Hour Base Flows (17:00 – 18:00);
- Diagram 3: 2019 Annual Average Daily Traffic Base Flows.

These diagrams and all others referenced in this text can be found in *Appendix B*, attached to this report. Any apparent discrepancy in flows between sites may be attributed to vehicles accessing developments and minor roads between surveyed junctions.

TA 79/99 "Traffic Capacity of Urban Roads" from the DMRB provides information on the capacity of urban roads based on classification and width. Table 6 following shows the capacities of various road types based on this manual and uses a 60:40 split in flow.

Table 6: Urban Road Capacities

2 Way Single Carriageway – Busiest Direction of Flow (60/40 split)										
Carriageway Width (m)		Total Number of lanes								
		2			2-3		3	3-4	4	4+
		6.10	6.75	7.30	9.0	10.0		12.3	13.5	18.0
Road Type	UM	Not Applicable								
	UAP1	1020	1320	1590	1860	2010	2550	2800	3050	3300
	UAP2	1020	1260	1470	1550	1650	1700	1900	2100	2700
	UAP3	900	1110	1300	1530	1620	*	*	*	*
	UAP4	750	900	1140	1320	1410	*	*	*	*

The local links have been classified based on the associated definitions in the DMRB. Using the previous table, link capacities have been calculated and current Ratio of Flow to Capacity (RFC) values have been assessed for the key links bordering the site. These are shown for the base year peak hours in

Table 7.

It should be noted that given the variation in width across the links in question, an average figure for each has been used which is rounded down to the nearest value shown in the above table, thus ensuring a conservative assessment of link capacity.

Table 7: Base Year Link RFC Values for Local Network

Link	Width (m)	Link Capacity (veh/hr)	A.M. Peak (veh/hr)	RFC (%)	P.M. Peak (veh/hr)	RFC (%)
Grange Road	6.0	1020	524	52%	126	13%
Kellystown Road	5.0	900	112	13%	28	4%
R113	7.0	1260	499	40%	427	34%
Woodside Road	5.0	900	51	6%	56	7%
R117	7.0	1260	495	40%	615	49%
Kilgobbin Road	8.0	1590	567	36%	477	30%

As can be seen, all links are operating within capacity in the base case with RFC values ranging between 10 – 74% with the R133 experiencing the highest value during the morning peak, and the R117 experiencing the highest value during the afternoon peak. Overall, the R117 carries the highest volume across both peak hours.

TRAFFIC GROWTH

To accurately assess the impact of the proposed development in the future, the base traffic flows for the local network in 2019 (2017 and 2018 volumes were changed to 2019 using annual growth) have been expanded to the Year of Opening and the Design Year using the medium-range NRA growth factors detailed in Table 8 following.

Table 8: Background Traffic Growth Factors

Year	Growth Rates	
	Light Vehicles	Heavy vehicles
2019 - 2024	6.64%	12.33%
2019 - 2039	24.29%	53.40%

The future year traffic flows without development can be seen in the following:

- *Diagram 4: 2024 A.M. Peak Hour Flows – Do Nothing;*
- *Diagram 5: 2024 P.M. Peak Hour Flows – Do Nothing;*
- *Diagram 6: 2024 AADT – Do Nothing;*

- *Diagram 7: 2039 A.M. Peak Hour Flows – Do Nothing;*
- *Diagram 8: 2039 P.M. Peak Hour Flows – Do Nothing;*
- *Diagram 9: 2039 AADT – Do Nothing.*

The application of the above growth factors should be further considered in the context of the Covid 19 pandemic which is expected to have a lasting impact on the traffic growth potential and travel patterns over the coming years. Specifically, growth factors are generally developed having regard to projections for economic growth. The global pandemic has had a significant impact in this regard which means such projections are now unlikely to be realised meaning traffic growth is expected to be similarly over-estimated.

Furthermore, restrictions imposed because of the pandemic response have resulted in a significant portion of the population being forced to work from home. This has highlighted the viability of this approach in industries where it was previously thought to be incompatible. The knock-on effect is expected to be a percentage of workers continuing to be based at home on a part- or full-time basis even after the pandemic restrictions are lifted. This in turn will have a knock-on effect on commuter and peak traffic levels. The National Transport Authority (NTA) has acknowledged this likelihood in a recently circulated note titled "Alternative Future Scenario for Travel Demand" dated November 2020 where it defines the Covid 19 pandemic as a "shock wave" that "can lead to an acceleration in the natural rate of change in society". The note concludes that the total number of daily trips could be up to 8% lower than previous projections.

Thus, taking the above into consideration, the applied growth factors are considered to be very conservative.

4. CHARACTERISTICS OF THE DEVELOPMENT

DEVELOPMENT & SITE OVERVIEW

The proposed development will consist of 360 no. residential units and associated infrastructure as noted in the introduction.

The proposed layout is shown in Figure 13 below.

Figure 13: Site Layout

Access to the Main Development Site will be via a junction on Blackglen Road, between Junctions 3 and 4.

The proposed access is a simple, single-lane, priority junction based on the results of the traffic analysis discussed in more detail later in this report.

The main vehicular access to the development car park will be via Blackglen Road. The car park on the eastern side of the development site will access directly onto Blackglen Road. This will be a very low-volume movement, with the majority of vehicles accessing the development via the main entrance. Additional access will be available via Woodside Road, although this access is only for emergency purposes and will not allow vehicular access under normal conditions.

DEVELOPMENT ACCESS

The development will be accessed via Blackglen Road. One main access to the development will be provided, with a second access just east of this. The second access will be minor and will provide access to a portion of car parking only, for the site.

The reason why this second access is required is due to the topography of the site. Drawing a line through the site from north to south, on the eastern side yields the following topography:

Figure 14: Topography of Site from North to South

From this topography, it is evident that there is a gradual slope (avg 4.0%) from Blackglen Road (left side) for approximately 50m, after which the slope increases significantly. From 50m to 100m the slope increases to an average of 10.7%.

Should this area be accessed from the site, the resultant ramp which would be required to get down from the top to the bottom would render this portion of the site unusable, as most of the space would be required for the access ramp. This means that parking spaces would need to be further reduced. Access via Blackglenn Road will result in a much more gradual slope, which means the majority of the space in question can be utilised for car parking, rather than access.

REFUSE COLLECTION AND DELIVERIES

Autotrack was conducted for fire tender and refuse for the scheme, which means that large vehicles can traverse it. There will be a collection and drop-off area at the entrance to the site. It is envisaged that refuse will be collected throughout the development and moved to the entrance, where refuse vehicles can collect it.

TRIP GENERATION

The traffic generation potential of the proposed development has been estimated using the Trics software modelling database. This database contains records of surveys carried out at a range of development types across the UK and Ireland. It records a variety of details including the number and type of vehicles entering and exiting the site as well as several other site-specific factors.

When developing traffic generation estimates for any development, several surveys are selected from the database based on a range of factors including development type, size, location, public transport etc. The results are then used to establish trip rates for the development in question which is ultimately used to derive estimates for traffic generation.

The ancillary elements such as the amenities and childcare facility are expected to serve residents at the development and as a result, they are not expected to be independent trip generators and have not been included in this assessment from a trip generation perspective.

It is noted that the potential additional trips generated by the proposed SHD development are estimated by the housing trips to allow the maximum estimated trips included as part of this assessment to ensure a comprehensive and conservative assessment.

The trip generation estimates for the proposed development are shown in Table 9 while the Trics output files relative to this assessment can be found in *Appendix C* of this report.

Time Range	Apartments		
	<i>Arrivals</i>	<i>Departures</i>	<i>Total</i>
00:00-01:00	0	0	0
01:00-02:00	0	0	0
02:00-03:00	0	0	0
03:00-04:00	0	0	0
04:00-05:00	0	0	0
05:00-06:00	0	0	0
06:00-07:00	0	0	0
07:00-08:00	22	52	74
08:00-09:00	22	68	89
09:00-10:00	33	46	78
10:00-11:00	27	28	55
11:00-12:00	27	29	56
12:00-13:00	36	31	66

20:00-21:00	0	0	0
21:00-22:00	0	0	0
22:00-23:00	0	0	0
23:00-24:00	0	0	0
<i>Daily Trips:</i>	437	470	907

Table 9: Estimated Future Trips Generated by the Development

Based on this, the proposed SHD development is expected to generate approximately 907 additional trips per day. Of these, approximately 22 arrivals and 68 departures are expected during the A.M. peak (08:00 – 09:00) while approximately 68 arrivals and 35 departures are expected in the P.M peak hour (17:00 – 18:00).

The above traffic has been assigned to the local road network based on an overall consideration of its existing layout combined with surveyed traffic patterns in the study area. The assigned development traffic can be seen in the following:

- *Diagram 10: A.M. Peak Hour Trip Generation & Assignment;*
- *Diagram 11: P.M. Peak Hour Trip Generation & Assignment;*
- *Diagram 12: AADT Trip Generation & Assignment.*

5. CAR PARKING STRATEGY

In developing the car parking provision, consideration has been given to a wide variety of factors including the applicable standards, realistic demand and measures that can be put in place to manage and control parking at the site. Each of these factors is discussed in further detail following.

PARKING STANDARDS

Apartment Guidelines

According to the "Sustainable Urban Housing: Design Standards for New Apartments" (December 2020), the bicycle parking requirement states a minimum of 1 cycle storage per bedroom should be provided. Visitor cycle parking shall be provided at 1 space per 2 residential units.

The "Sustainable Urban Housing: Design Standards for New Apartments" (December 2020) defines three types of urban areas:

- **Central/Accessible Urban** - In larger scale and higher density developments, comprising wholly of apartments in more central locations that are well served by public transport, the default policy is for car parking provision to be minimised, substantially reduced or wholly eliminated in certain circumstances (15 minutes' walk of city centre/employment location, 10 minutes of rail, 5 minutes of high-frequency bus services (10 min peak hour frequency));
- **Intermediate Urban Locations** - suburban/urban locations served by public transport or close to town centres or employment areas and particularly for housing schemes with more than 45 dwellings per hectare net (18 per acre), planning authorities must consider a reduced overall car parking standard and apply an appropriate maximum car parking standard;
- **Peripheral/Less Accessible Urban Locations** - one car parking space per unit, together with an element of visitor parking, such as one space for every 3-4 apartments, should generally be required

The site boundary is not within walking distance of a large urban centre. The local bus services 44B & 114 operate during peak hours and every 30 mins respectively and provide connections to nearby urban centres. Neither bus route currently provides connections to the city centre. It is noted that the BusConnects plan for the area includes the introduction of bus services 86, 87, 88 and L33. Although these services will provide connections to the city centre, they are not expected to be "high frequency". The proposed site is located within a 1.9km walk (27 min) from the Luas stop at Glencairn.

Intermediate urban locations are generally defined by the following:

- Sites within or close to i.e., within reasonable walking distance (i.e., up to 10 minutes or 800-1000m), of principal town or suburban centres or employment locations, that may include hospitals and third-level institutions;
- Sites within walking distance (i.e., between 10-15 minutes or 1000-1500m) of high-capacity urban public transport stops or within reasonable walking distance (i.e., between 5-10 minutes or up to 1000m) of high-frequency urban bus services or where such services can be provided;
- Sites within easy walking distance (i.e., up to 5 minutes or 400-500m) of reasonably frequent urban bus services.

The Blackglen site is within 1900m of the Luas line. This is slightly further than the recommended 1500m. However, since the site is located within the catchment area of the Section 49 Luas Development Contribution Scheme, the proximate Glencairn and Sandyford Luas stops, and the existing bus stops, it is deemed appropriate to classify the site as an *Intermediate Urban Location*. This can be further motivated due to the proximity of the site to the Beacon Hospital and Sandyford Business Park, both of which provide significant employment opportunities, with the latter containing more than 500 no. companies.

The standards state that for development in an intermediate location, particularly for housing sited with more than 45 dwellings per hectare net, planning authorities must consider a reduced overall car parking standard and apply an appropriate maximum car parking standard. The guidelines do not provide a specific standard for this location, rather just to consider a reduced provision.

Furthermore, as mentioned previously, for bicycle parking there is a requirement of 1 long-term space (resident) per bedroom and 1 short-term (visitor) space per 2 residential units. This equates to a total requirement of **597 long-term spaces** and **180 short-term spaces**.

DLR Development Plan 2022 - 2028

The Dun Laoghaire Rathdown Development 2022 – 2028, Chapter 12, states that the required parking is based on the location of the development. Four parking zones are defined:

- Parking Zone 1: Comprises the Major Town Centre areas of Dún Laoghaire and Dundrum together with the Blackrock District Centre area;
- Parking Zone 2: This zone generally includes areas, which are within specified walking bands/catchments;
- Parking Zone 3: This zone generally comprises the remainder of the County, excluding rural areas;
- Parking Zone 4: This zone comprises the rural areas within the County.

As part of the development plan, a supplementary map is provided (Map T2) which shows the Parking Zones. From this map, it is shown that the development will be located within Zone 3.

The criteria for Apartments for Zone 3 state:

- 1 space per 1-bed unit,

- 1 space per 2-bed unit,
- 2 spaces per 3+ bed unit, and
- 1 space per 10 apartments.

The development consists of the following split between apartments:

- 123 no. 1-bed apartments,
- 224 no. 2-bed apartments, and
- 13 no. 3-bed apartments.

Based on the above, there is a requirement for 409 car parking spaces for the residential component of the development. It is noted that these parking standards represent a maximum.

In addition, there is a requirement of 1 parking space per 40 m² for the creche. This would equate to a further requirement of 10 no. car parking spaces for this aspect.

Thus, to be in line with the latest Development Plan Standards, a total of **419 no. car parking spaces** would be required.

The Development Plan also gives guidance on the number of motorcycle parking spaces required. The document stipulates a minimum of four or more spaces per 100 car parking spaces. Since there is a requirement of 419 no. car parking spaces, this equates to a minimum requirement of **17 no. motorcycle parking spaces**.

Standards for Cycle Parking and associated Cycling Facilities for New Developments

The Standards for Cycle Parking and associated Cycling Facilities for New Developments published by DLR in January 2018 provide guidance on the requirement for cycle parking.

The standards state that for apartments, there is a requirement of 1 long stay (resident) parking space per 1 unit. There is also a requirement of 1 short stay (visitor) parking space per 5 units.

This equates to a requirement of **360 no. long-stay (resident) spaces** and **72 no. short stay (visitor) spaces**.

CAR PARKING PROVISION

The following car parking is provided by the development:

Table 10: Car Parking provided by the Development

Block/Parking Type	No. Units	Car Parking	
		Normal Spaces	DAC Spaces (incl)
Block A1+A2 - Podium	42	29	3
Block B1+B2 - Podium	69	33	2
Block B3+B4 – Podium/Basement	62	72	2
Block C1,2,3 – Podium/Basement	187	185	8
Surface Parking	-	100	10
Total	360	419	26 (5%)

The provided car parking meets the requirement of the latest DLR County Development Plan 2022 – 2028.

Furthermore, as per the requirement of the Development Plan, residential developments require a minimum of one car parking space per five car parking spaces to be equipped with one fully functional EV Charing Point. The development will provide a total of 80 no. spaces with EV functionality to meet this requirement.

The development will also provide for 19 no. motorcycle parking spaces to be in line with the requirements as per the Development Plan.

CYCLE PARKING PROVISION

The following cycle parking is provided by the development:

Table 11: Bicycle Parking provided by the Development

Block/Parking Type	No. Units	Bicycle Parking	
		Long Term (Resident)	Short Term (Visitor)
Block A1+A2 - Podium	42	80	-
Block B1+B2 - Podium	69	80	-
Block B3+B4 – Podium/Basement	62	164	-
Block C1,2,3 – Podium/Basement	187	416	-
Surface Parking	-	-	230
Total	360	740	230

The provided cycle parking exceeds the requirements of both the Apartment Guidelines and the latest DLR County Development Plan 2022 – 2028.

Safe and secure long-term parking will be provided for residents, while short-term parking will be provided in the form of Sheffield stands.

CAR SHARING

Traditionally, car parking has been provided within Dublin to primarily facilitate a storage role. This is on the basis that a car is not used on a regular basis such as for commuting and is instead required for infrequent trips such as bulky shopping trips which could not be facilitated through public transport or weekend, off-peak recreational trips. This is considered to be an especially inefficient use of space, particularly in the context of the current housing crisis.

One of the key proposals within the Mobility Management Plan for the site is the potential for the provision of car club vehicles. This will be based on a survey of residents to establish if such a demand exists and, if so, subsequently engage with a car club operator with a view to setting up a station for one or more car club vehicles on-site.

This is in line with the *Guidelines for Planning Authorities, Design Standards for New Apartments* which state:

"As well as showing that a site is sufficiently well located in relation to employment, amenities and services, it is important that access to a car-sharing club or other non-car based modes of transport are available and/or can be provided to meet the needs of residents, whether as part of the proposed development or otherwise. 'Car free' development is permissible and if developed, must be fully communicated as part of subsequent apartment sales and marketing processes".

Car club services are very simple to use, with licensed and registered users able to book a vehicle through convenient means such as a phone app. Fuel, tax, insurance, cleaning and maintenance costs are all typically included as part of the overall package which is a further incentive for users to switch from private car ownership as the overall cost of owning a car relative to the amount of use is not as attractive in many instances.

GoCar is an example of such an operator who is a well-established and experienced car club operator in Dublin. GoCar has carried out a survey of their existing users to show the effectiveness of such a service, with the key results summarised as follows:

- 86% of GoCar use was for personal use with 14% for business use;
- 59% of GoCar users have used the service to replace a personal vehicle;
- 69% of users cite convenience as the biggest advantage of GoCar;
- 30% of users cite insurance costs as the biggest issue with owning a car while 26% cite maintenance and fuel costs as the biggest issue;
- Each GoCar takes 14 cars off Dublin streets;
- The top uses of GoCar are:
 - Day trips;
 - Family taxi;
 - Big shopping trips.
- The average GoCar is used for just 1 hour a day.

Thus, such a facility would have numerous benefits over the current parking provision model, including:

- Reducing the need for car ownership and thereby reducing the potential for unnecessary travel by car;
- Maintaining access to travel by car to satisfy infrequent, unique trips as outlined previously;
- Reducing the space required for car parking provision and associated cost which has an associated positive impact on unit affordability;
- Reducing costs associated with car use as long-term tax, insurance and maintenance costs associated with car ownership (estimated at €10,849.92 by AA Ireland) are replaced with significantly lower, short-term costs consolidated into one payment;
- Facilitating more environmentally friendly car travel as 10% of the GoCar fleet consists of electric vehicles, with this share set to increase in the future.

Car clubs also have the added bonus of not contributing to long-term commuting by car. As the vehicles must be returned from the point of origin, i.e. the development site, the cost associated with using them on a daily basis for commuting purposes means it would not be a realistic option.

CARGO BICYCLES AND WORKSHOP

The development will provide a Cargo Bike service, as well as an on-site bicycle workshop. The Cargo Bike service will be highlighted to residents with associated information on how to register, how the system operates and the cost of use. The bike workshop, which includes facilities such as air pumps and repair tools will be available for use by a resident of the development. This emphasis on cycling and sustainable transport should assist in reducing car usage in the development.

To meet any potential demand for Cargo Bicycles, the development will provide 1 no. Cargo Bicycle space per 20 no. residential units. There is also scope to further increase the number of Cargo Bicycle spaces in lieu of excess bicycle parking spaces, should the management company identify this need in future.

MOBILITY MANAGEMENT PLAN

A Mobility Management Plan has been prepared and submitted under separate cover as part of this application. The plan set out a series of objectives which relate to facilitating and encouraging travel by sustainable means. The plan includes details of a combination of hard and soft measures included in the development design and proposed to be put in place for its operation to achieve the stated objectives.

The plan will be a living document, continually updated in light of the experience gained through its operation in conjunction with residents and the Local Authority to ensure the maximum benefit is achieved.

6. POTENTIAL IMPACT OF DEVELOPMENT CONSTRUCTION

It is difficult to assess the exact quantum of traffic that will be generated during the construction period. However, a few preliminary estimates have been made based on the extent of excavation, type of development and estimated phasing. These are summarised as follows:

- 30 no. private vehicles per day from staff and site visitors i.e. 60 no. vehicle movements;
- 25 no. light goods vehicles per day from subcontract staff i.e. 50 no. vehicle movements;
- 100 no. heavy goods vehicles per day during peak excavation process i.e. 200 no. vehicle movements;
- 40 no. heavy goods vehicles per day outside of the peak excavation periods i.e. 80 no. vehicle movements.

When estimating the potential impact of the construction stage, several factors have been taken into consideration as follows:

- The peak traffic hours have been defined as 08:00-09:00 and 17:00-18:00. The normal permitted construction working hours are 08:00 to 19:00 on a weekday. As a result, staff travelling in private vehicles will arrive and depart the site outside of the peak traffic hours;
- The excavation period is considered to represent the peak of HGV movements at 100 per day, based on 10 vehicles per hour. The assessment has considered this volume of traffic as it represents the worst-case scenario;
- Heavy excavation and delivery vehicles travelling to and from the site will be spread across the course of the working day and efforts will be made to limit the number of arrivals and departures during the peak traffic hours where possible. However, for the purposes of this assessment a worst-case scenario is assumed where no such restrictions are in place and 10 no. HGVs are allowed during peak hours;
- The majority of contractor vehicles are expected to arrive and depart just before and after the site opening and closing hours respectively,

with a small number, spread across the course of the day. However, in the interest of a conservative assessment, all have been assumed to arrive in the A.M. peak hour and depart in the P.M. peak hour.

Taking the above into consideration, the estimated construction vehicle movements relative to the operational vehicle movements are set out in Table 12. Please note that vehicle movements are a summation of arrivals and departures e.g. 10 no. vehicles arriving and 5 no. vehicles departing equates to 15 no. vehicle movements.

Table 12: Construction vs. Operational Vehicle Movements

Time Period	Construction Stage	Operational Stage
08:00 – 09:00	45	89
17:00 – 18:00	45	103
Daily	310	907

As can be seen, the peak hour vehicle movements for construction vehicles will be less than that of the operational vehicle numbers, despite a conservative assessment with respect to construction traffic. Daily construction vehicle movements are notably less than the operational stage movements. Thus, taking into consideration, the temporary nature of construction activity and the detailed analysis of the operational stage in the following section, a bespoke detailed analysis of the construction stage has not been deemed necessary.

This stage of the development is considered in more detail in the Construction and Environmental Management Plan and Construction & Demolition Waste Management Plan which will be prepared by the assigned contractor.

7. POTENTIAL IMPACT OF DEVELOPMENT OPERATION

To assess the actual impact of the operational development on the local road network, three different scenarios have been analysed as follows:

- Base Year (2019) – The current performance of the local road network;
- Year of Opening (2024) – The performance of the local road network during the Year of Opening;
- Design Year (2039) – The performance of the local road network during the Design Year.

The future year assessments considered the following scenarios:

- Year of Opening: Do Nothing – Allowing for only normal background traffic growth;
- Year of Opening: Do Something – Allowing for normal background traffic growth and the additional traffic generated by the proposed development;
- Design Year: Do Nothing – Allowing for only normal background traffic growth and no other development;
- Design Year: Do Something – Allowing for normal background traffic growth and the additional traffic generated by the proposed development;

The junction analysis was carried out using Junctions 9 and TRANSYT and the link capacities for the Year of Opening and the Design Year were assessed based on the same methodology outlined earlier in this report.

BASE YEAR (2019)

A summary of the analysis results for each scenario at the Year of Opening can be seen in the tables following, thereby allowing the true impact of the proposed development to be assessed. The associated model output files can be found in Appendix C of this report.

When considering the results, the following should be considered:

- The RFC values represent the maximum experienced by the respective arm of the junction;
- Where new junctions are to be assessed the Do Nothing scenario is not considered as they do not form part of the Do Nothing scenario;
- Where a signalised junction is modelled the software has been allowed to optimise the signal plan to show the most efficient operation of the junction;
- Results of junction capacity are displayed in RFC or Degree of Saturation (DOS), both terms are interchangeable and identify the reserve capacity of a junction i.e. 100% DOS indicates no reserve capacity.
- All queue lengths shown represent the average experienced by the respective arm in Passenger Car Units (PCUs). A Passenger Car Unit is a measure used primarily to assess junction capacity, for modelling purposes. Different vehicles are assigned different values, according to the space they take up. A car has a value of 1 and larger vehicles will have higher values.

Junction 1

Table 13: Junction 1 – 2019 Peak Hour Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	<i>DOS</i>	<i>Queue</i>	<i>DOS</i>	<i>Queue</i>
Grange Road	59	9.75	63	11.59
Kellystown Road	63	10.34	66	10.15
Harold's Grange Road	24	2.66	23	2.87
College Road	72	11.07	28	3.02

The results show that Junction 1 currently operates at a relatively high degree of saturation, albeit some spare capacity is available. Especially on College Road in the morning peak, and Grange Road and Kellystown Road in the afternoon peak.

Junction 2

Table 14: Junction 2 – 2019 Peak Hour Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Harold's Grange Road	-	-	-	-
Ticknock Park	3	0	3	0
Blackglen Road	2	0	1	0

This junction has ample capacity available for future growth.

Junction 3

Table 15: Junction 3 – 2019 Peak Hour Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Blackglen Road West	5	0.1	6	0.1
Blackglen Road East	-	-	-	-
Woodside Road	15	0.4	9	0.2

Like Junction 2, this junction also operates at very low demand, with sufficient capacity available.

Junction 4

Table 16: Junction 4 – 2019 Peak Hour Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Sandyford Road	14	2.95	53	3.31
Hillcrest Road	16	4.43	38	4.81
Enniskerry Road	46	4.90	28	4.59
Blackglen Road	49	4.89	16	4.35

This junction has sufficient capacity available, especially with right-turn lanes and phasing. Queues in general are acceptable.

Junction 5

Table 17: Junction 5 – 2019 Peak Hour Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	<i>DOS</i>	<i>Queue</i>	<i>DOS</i>	<i>Queue</i>
Kilgobbin Road North	15	1.83	23	3.74
Leopardstown Road	9	2.17	30	5.79
Kilgobbin Road	24	3.07	13	2.04
Hillcrest Road	29	4.13	16	2.17

Junction 5 is a large junction with signalised slip lanes and right-turn lanes. This junction has ample capacity available, with short queues.

YEAR OF OPENING (2024)

As noted previously, the assessment considers the Do Nothing and Do Something scenarios. The latter is established by adding the traffic estimated to be generated by the proposed development to the pre-Covid, future year traffic flows estimated previously and is shown in the following:

- *Diagram 13: 2024 A.M. Peak Hour Flows – Do Something;*
- *Diagram 14: 2024 P.M. Peak Hour Flows – Do Something;*
- *Diagram 15: 2024 AADT – Do Something;*

Prior to the analysis of the individual junctions, the main links in the network have been assessed for the Horizon Year Do Something scenario, with the results shown in Table 18.

Table 18: 2024 Do Something Scenario Link RFC Values

Link	Width (m)	Link Capacity (veh/hr)	A.M. Peak (veh/hr)	RFC (%)	P.M. Peak (veh/hr)	RFC (%)
Grange Road	6.0	1020	120	12%	138	14%
Kellystown Road	5.0	900	24	3%	30	4%
R113	7.0	1260	554	44%	481	39%
Woodside Road	5.0	900	56	7%	61	7%
R117	7.0	1260	536	43%	667	53%
Kilgobbin Road	8.0	1590	615	39%	518	33%

The results show that the local links continue to operate within capacity during both peak hours.

A summary of the analysis results for each scenario at the Year of Opening can be seen in the tables following, thereby allowing the true impact of the proposed development to be assessed. The associated model output files can be found in Appendix C of this report.

When considering the results, the following should be taken into account:

- The RFC values represent the maximum experienced by the respective arm of the junction;
- Where new junctions are to be assessed the Do Nothing scenario is not considered as they do not form part of the Do Nothing scenario;
- Where a signalised junction is modelled the software has been allowed to optimise the signal plan to show the most efficient operation of the junction;
- Results of junction capacity are displayed in RFC or Degree of Saturation (DOS), both terms are interchangeable and identify the reserve capacity of a junction i.e. 100% DOS indicates no reserve capacity.
- All queue lengths shown represent the average experienced by the respective arm in Passenger Car Units (PCUs). A Passenger Car Unit is a measure used primarily to assess junction capacity, for modelling purposes. Different vehicles are assigned different values, according to

the space they take up. A car has a value of 1 and larger vehicles will have higher values.

Junction 1

Table 19: Junction 1 – 2024 Peak Hour Do Nothing Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Grange Road	65	11.01	69	13.22
Kellystown Road	69	11.94	72	11.61
Harold's Grange Road	26	2.96	26	3.17
College Road	79	12.89	30	3.30

Table 20: Junction 1 – 2024 Peak Hour Do Something Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Grange Road	67	11.39	69	13.71
Kellystown Road	71	12.52	72	12.10
Harold's Grange Road	28	3.05	25	3.24
College Road	77	12.71	30	3.44

The results show a slight increase in both DOS and queuing in the Do Something when compared to the Do Nothing. The junction operates within capacity with a maximum DOS value of 79% and a maximum queue length of 12.89 PCU, both occurring on College Road during the morning peak.

Junction 2

Table 21: Junction 2 – 2024 Peak Hour Do Nothing Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Harold's Grange Road	-	-	-	-
Ticknock Park	4	0	3	0
Blackglen Road	2	0	1	0

Table 22: Junction 2 – 2024 Peak Hour Do Something Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Harold's Grange Road	-	-	-	-
Ticknock Park	4	0	3	0
Blackglen Road	2	0	1	0

The results show the junction operates with extremely low RFC values and negligible queuing.

Junction 3

Table 23: Junction 3 – 2024 Peak Hour Do Nothing Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Blackglen Road West	16	0.5	11	0.3
Blackglen Road East	-	-	-	-
Woodside Road	6	0.1	7	0.1

Table 24: Junction 3 – 2024 Peak Hour Do Something Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Blackglen Road West	17	0.5	11	0.3
Blackglen Road East	-	-	-	-
Woodside Road	6	0.1	7	0.1

The results show that the junction operates well within capacity with the development in place, with almost negligible increases in RFC values and queue lengths relative to the Do Nothing Scenario.

Junction 4

Table 25: Junction 4 – 2024 Peak Hour Do Nothing Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Sandyford Road	28	2.95	63	3.41
Hillcrest Road	38	4.45	66	4.93
Enniskerry Road	66	4.93	54	4.64
Blackglen Road	71	5.15	26	4.39

Table 26: Junction 4 – 2024 Peak Hour Do Something Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Sandyford Road	30	2.96	63	3.41
Hillcrest Road	36	4.45	71	5.15
Enniskerry Road	74	5.28	55	4.67
Blackglen Road	72	5.21	28	4.40

The results show that the junction operates with ample spare capacity and acceptable queue lengths. The results show only minor increases in RFC values and queue lengths relative to the Do Nothing Scenario.

Junction 5

Table 27: Junction 5 – 2024 Peak Hour Do Nothing Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Kilgobbin Road North	47	1.99	64	4.63
Leopardstown Road	10	2.34	61	6.48
Kilgobbin Road	26	3.10	48	2.20
Hillcrest Road	31	4.49	33	2.33

Table 28: Junction 5 – 2024 Peak Hour Do Something Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Kilgobbin Road North	49	2.07	63	4.63
Leopardstown Road	54	2.34	62	6.81
Kilgobbin Road	47	3.10	53	2.36
Hillcrest Road	43	5.08	35	2.45

The results show the junction operates with ample spare capacity and short queue lengths.

Junction 6 (Development Access)

Table 29: Junction 6 – 2024 Peak Hour Do Something Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Blackglen Road West	-	-	-	-
Blackglen Road East	3	0	7	0.1
Development Access	16	0.2	11	0.1

The development access operates at very low RFC values and short queue lengths during the opening year, as a stop-controlled T-junction. The access junction will not require any additional lanes, such as right-turning lanes in the opening year. It will function as a standard priority-controlled T-junction.

DESIGN YEAR (2039)

The Do Something traffic flows for the Design Year have been established using the same methodology outlined for the Year of Opening and can be seen in the following:

- *Diagram 16: 2039 A.M. Peak Hour Flows – Do Something;*
- *Diagram 17: 2039 P.M. Peak Hour Flows – Do Something;*
- *Diagram 18: 2039 AADT – Do Something.*

As before, prior to the analysis of the individual junctions, the main links in the network have been assessed for the Design Year Do Something scenario, with the results shown in Table 30.

Table 30: 2039 Do Something Scenario Link RFC Values

Link	Width (m)	Link Capacity (veh/hr)	A.M. Peak (veh/hr)	RFC (%)	P.M. Peak (veh/hr)	RFC (%)
Grange Road	6.0	1020	140	14%	160	16%
Kellystown Road	5.0	900	28	4%	35	4%
R113	7.0	1260	643	52%	562	45%
Woodside Road	5.0	900	65	8%	73	9%
R117	7.0	1260	625	50%	778	62%
Kilgobbin Road	8.0	1590	716	46%	603	38%

The results show that the local links continue to operate within capacity limits with a maximum RFC value of 62% experienced during the PM peak.

When considering the below results, the considerations outlined for the Year of Opening results continue to apply.

Junction 1

Table 31: Junction 1 – 2039 Peak Hour Do Nothing Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Grange Road	77	14.08	82	17.25
Kellystown Road	78	14.87	81	14.58
Harold's Grange Road	32	3.52	31	3.76
College Road	88	16.74	34	3.90

Table 32: Junction 1 – 2039 Peak Hour Do Something Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Grange Road	79	14.57	83	17.94
Kellystown Road	80	15.53	83	15.09
Harold's Grange Road	33	3.59	31	3.87
College Road	87	16.30	35	4.00

The results show a slight increase in both DOS and queuing in the Do Something when compared to the Do Nothing. The junction operates within capacity with a maximum RFC value of 87% and a maximum queue length of 17.94 PCU. This occurs on College Road (DOS) and Grange Road (Queue) during the afternoon peak. The results show that this junction will approach capacity during the design year, even without the additional trips generated by the development. It might be necessary to investigate the addition of right-turning lanes at this junction in the future.

Junction 2

Table 33: Junction 2 – 2024 Peak Hour Do Nothing Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Harold's Grange Road	-	-	-	-
Ticknock Park	5	0.1	4	0
Blackglen Road	3	0	2	0

Table 34: Junction 2 – 2024 Peak Hour Do Something Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Harold's Grange Road	-	-	-	-
Ticknock Park	5	0.1	4	0
Blackglen Road	3	0	2	0

The results show that the junction operates well within capacity with the development in place, with only minor increases in RFC values and queue lengths relative to the Do Nothing Scenario.

Junction 3

Table 35: Junction 3 – 2039 Peak Hour Do Nothing Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Blackglen Road West	21	0.5	15	0.5
Blackglen Road East	-	-	-	-
Woodside Road	7	0.1	9	0.1

Table 36: Junction 3 – 2039 Peak Hour Do Something Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Blackglen Road West	22	0.7	15	0.5
Blackglen Road East	-	-	-	-
Woodside Road	7	0.1	11	0.2

The results show that the junction operates within the capacity for both the Do Something and Do Maximum scenarios, with only minor increases in RFC values and queue lengths relative to the Do Nothing Scenario.

Junction 4

Table 37: Junction 4 – 2024 Peak Hour Do Nothing Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Sandyford Road	33	2.98	74	3.86
Hillcrest Road	43	4.50	76	5.46
Enniskerry Road	78	5.62	62	4.84
Blackglen Road	81	5.93	30	4.41

Table 38: Junction 4 – 2024 Peak Hour Do Something Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	DOS	Queue	DOS	Queue
Sandyford Road	33	2.98	75	3.86
Hillcrest Road	44	4.52	81	5.94
Enniskerry Road	79	5.71	64	4.89
Blackglen Road	86	6.80	32	4.42

The results show that by the Design Year, the junction will still have sufficient capacity to accommodate the background traffic, as well as the development trips.

Junction 5

Table 39: Junction 5 – 2039 Peak Hour Do Nothing Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	<i>DOS</i>	<i>Queue</i>	<i>DOS</i>	<i>Queue</i>
Kilgobbin Road North	55	2.42	69	5.34
Leopardstown Road	62	2.92	71	8.00
Kilgobbin Road	55	3.22	58	2.71
Hillcrest Road	75	5.95	40	3.01

Table 40: Junction 5 – 2039 Peak Hour Do Something Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	<i>DOS</i>	<i>Queue</i>	<i>DOS</i>	<i>Queue</i>
Kilgobbin Road North	56	2.51	73	5.35
Leopardstown Road	65	2.92	74	8.22
Kilgobbin Road	55	3.22	60	2.86
Hillcrest Road	78	6.41	41	3.02

The results show the junction operates with relatively low RFC values and short queuing for all scenarios considered, during the design year.

Junction 6 (Development Access)

Table 41: Junction 6 – 2039 Peak Hour Do Something Analysis Results

Approach	A.M. Peak Hour		P.M. Peak Hour	
	<i>DOS</i>	<i>Queue</i>	<i>DOS</i>	<i>Queue</i>
Blackglen Road West	-	-	-	-
Blackglen Road East	4	0	8	0.2
Development Access	18	0.2	13	0.1

The development access will continue to operate with extremely low RFC values and negligible queuing for all scenarios analysed as a stop-controlled T-junction. Like the Opening Year, the access will not require any additional

lanes, such as right-turning lanes during the Design Year. It will function as a standard priority-controlled T-junction.

SUMMARY

The result of the overall assessment shows that the local road network is capable of catering for the additional traffic associated with the proposed residential development without significant negative impact.

The proposed development site access junction is shown to work well using a priority T-junction layout, even during the design year.

In general, all junctions have sufficient capacity to accommodate the traffic, even up to the design year of 2039. Some queue lengths become longer, especially during the design year, however, the predicted 2039 traffic flows for all scenarios should be considered in the context of the following:

- The assessment has allowed for background traffic growth in accordance with the TII growth factors. This invariably results in a degree of double counting which is not possible to precisely quantify and subsequently adjust for. As a result, the predicted traffic flows are very conservative and are likely to not be realised in reality;
- TII growth factors are influenced by the long-term impact of Covid 19 which will result in both decreased economic growth and changes to commuting patterns. This means traffic growth is very unlikely to proceed as previously projected by TII and as allowed for as part of this assessment.

8. DO NOTHING SCENARIO

The do nothing scenario would involve leaving the subject site in its current undeveloped state. This would have a negative impact on the overall development of the area, particularly given the current housing shortage, while simultaneously showing no real benefit in transportation terms.

The local transport network has been shown to experience no notable negative impact as a result of a development of the type planned.

9. REMEDIAL/MITIGATION MEASURES

The assessment has shown no issues are created by the inclusion of the proposed development meaning no measures are required beyond those set out as part of the proposed development.

10. MONITORING

While it has been demonstrated that the proposed development has little impact on the operation of the local network, it is nevertheless recommended that the local area should be monitored in terms of transportation efficiencies in the future.

Of slight concern is Junction 4's queue lengths, though these are noted to not be caused by the proposed development. Given the relatively significant period in question, the conservative nature of the assessment and the considerable uncertainty about how traffic flows will change across such a period, it is not considered appropriate to put in place mitigation measures at present. Rather, it is recommended that this junction should be monitored.

Queue's are measured in meters

Cannot be seen from camera

- + Signifies queue stretches to a minimum length of x and beyond the view of the camera
- # Signifies queue stretches to the next significant junction
- * Indicates an estimated queue length due to obscured vision.
- M Indicates that the lane ends and the vehicles queuing merged into another lane to queue.

Queue lengths are compiled from CCTV observations and are therefore subject to the limitations of the camera view.

Queue's are measured in meters

- Cannot be seen from camera
- + Signifies queue stretches to a minimum length of x and beyond the view of the camera
- # Signifies queue stretches to the next significant junction
- * Indicates an estimated queue length due to obscured vision.
- M Indicates that the lane ends and the vehicles queuing merged into another lane to queue.

Queue lengths are compiled from CCTV observations and are therefore subject to the limitations of the camera view.

APPENDIX B: TRAFFIC FLOW DIAGRAMS

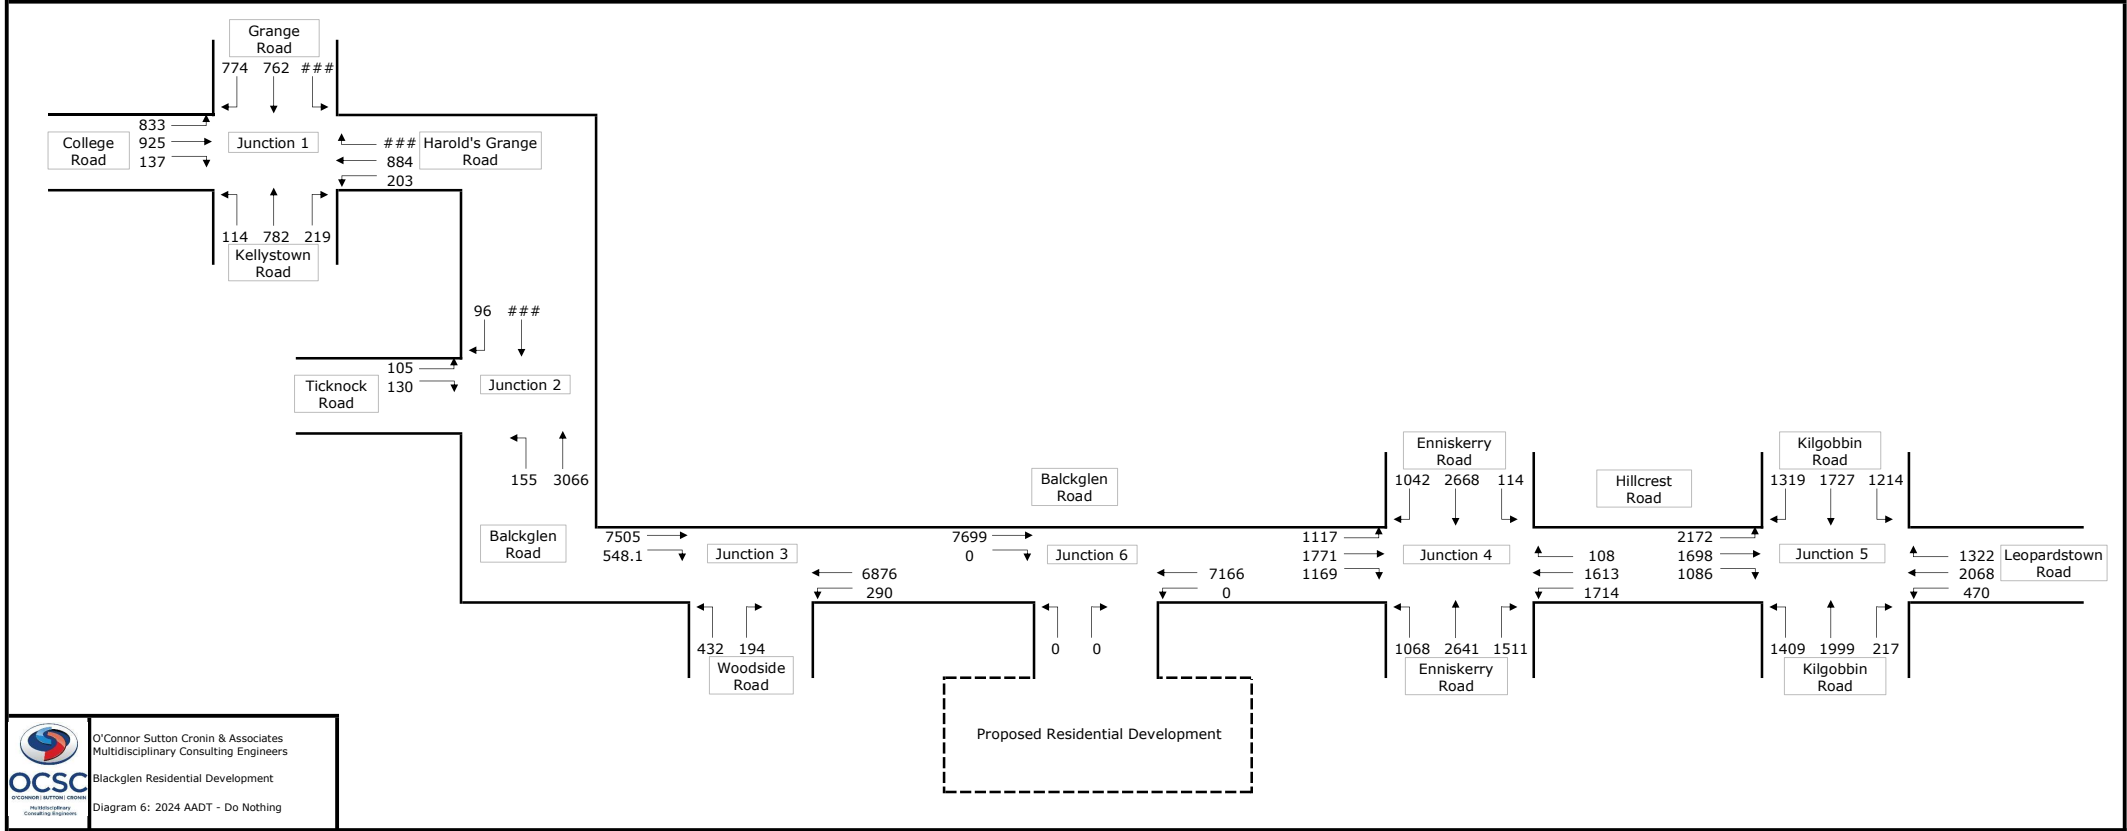

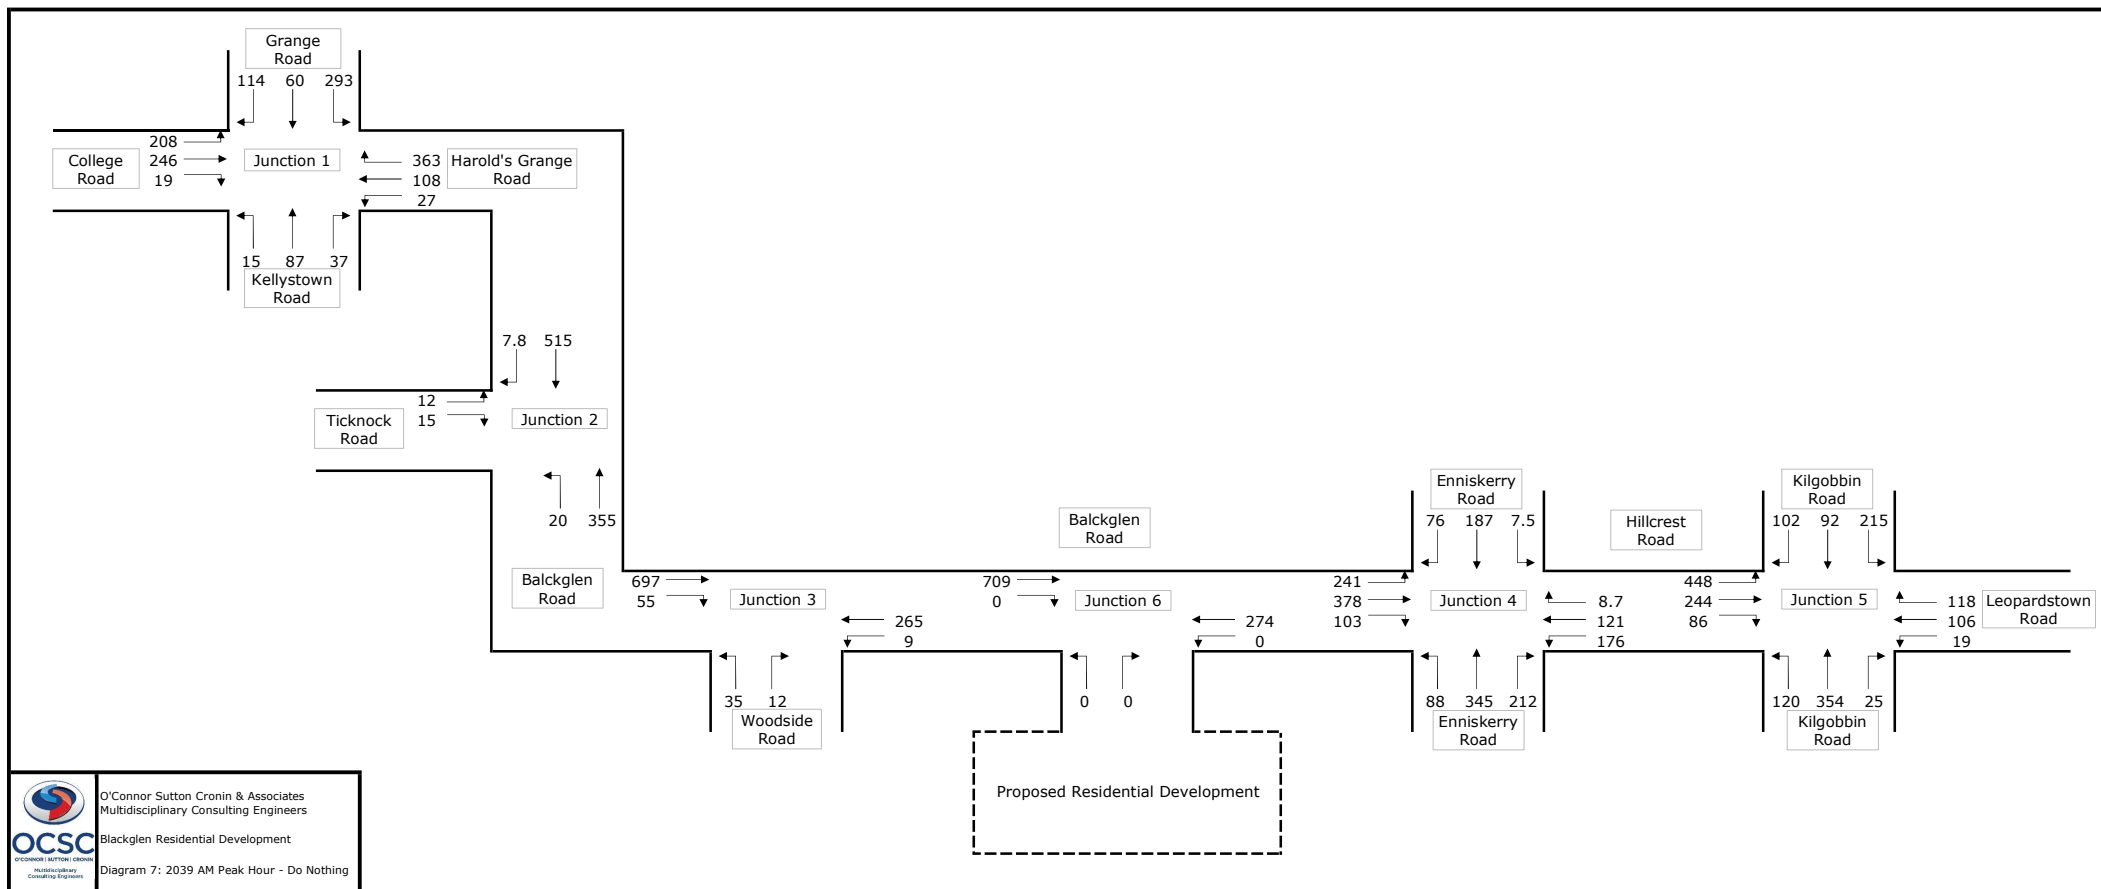

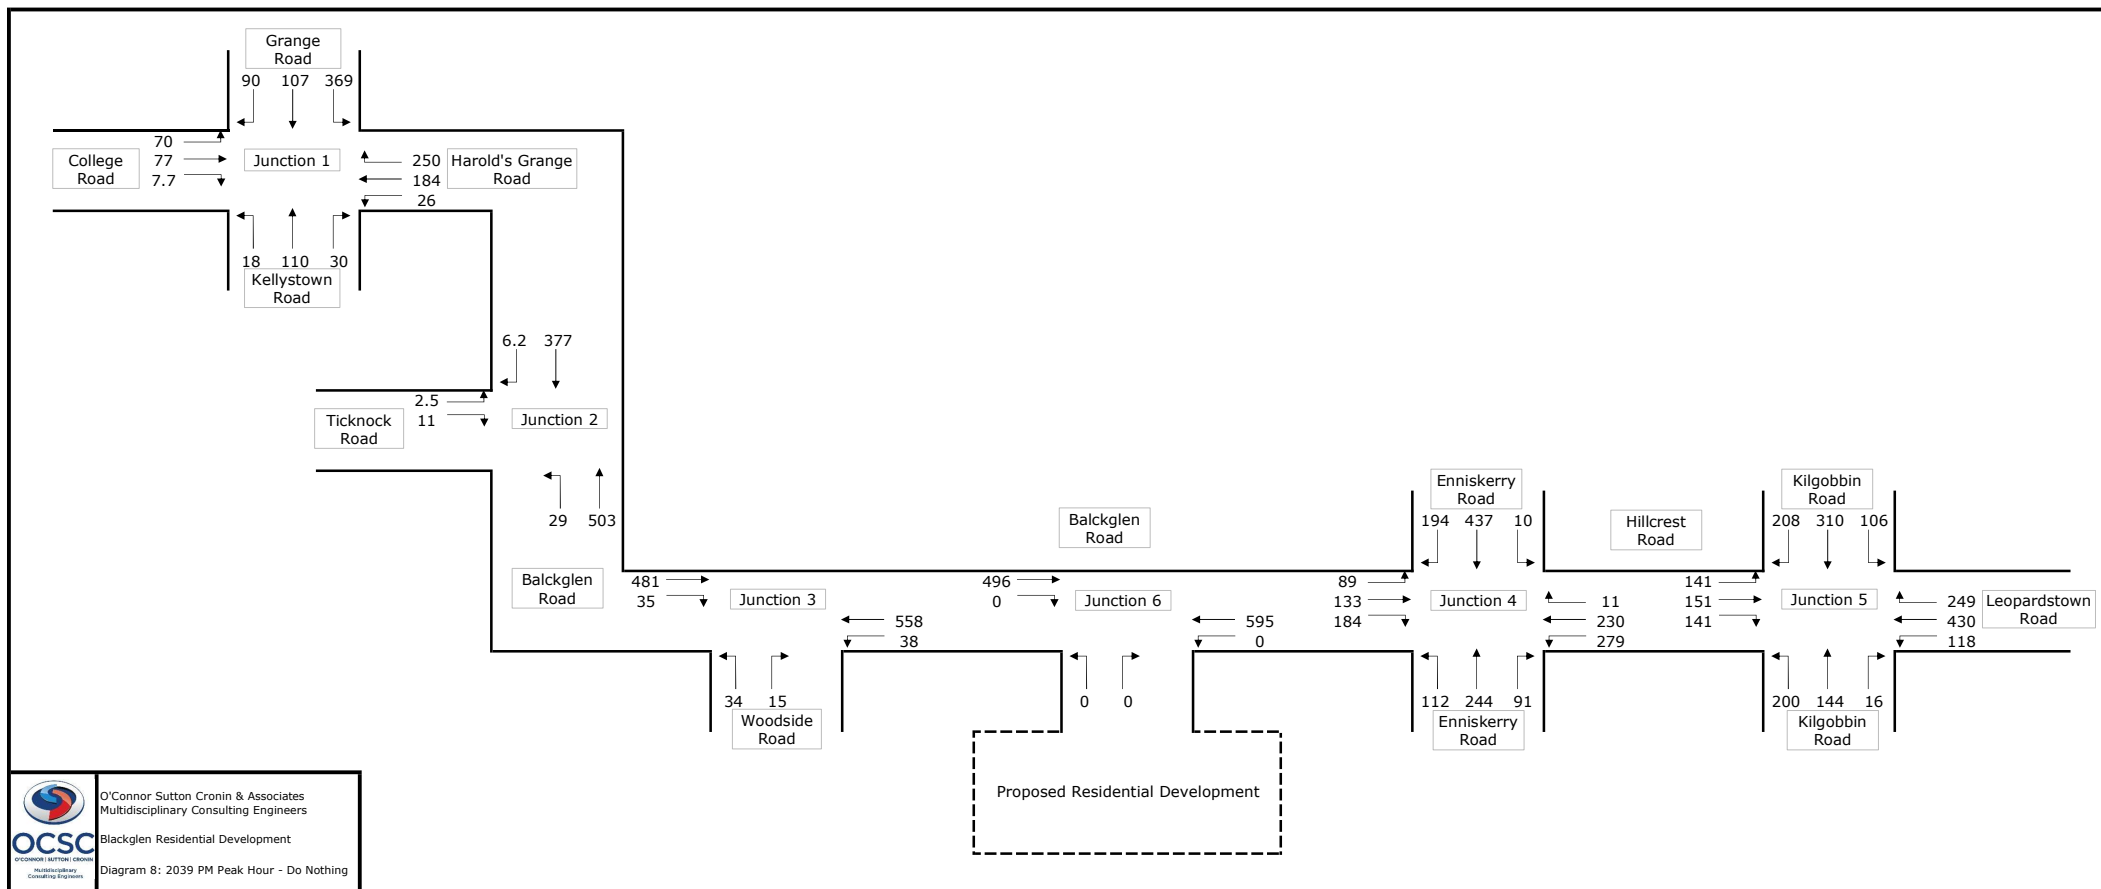

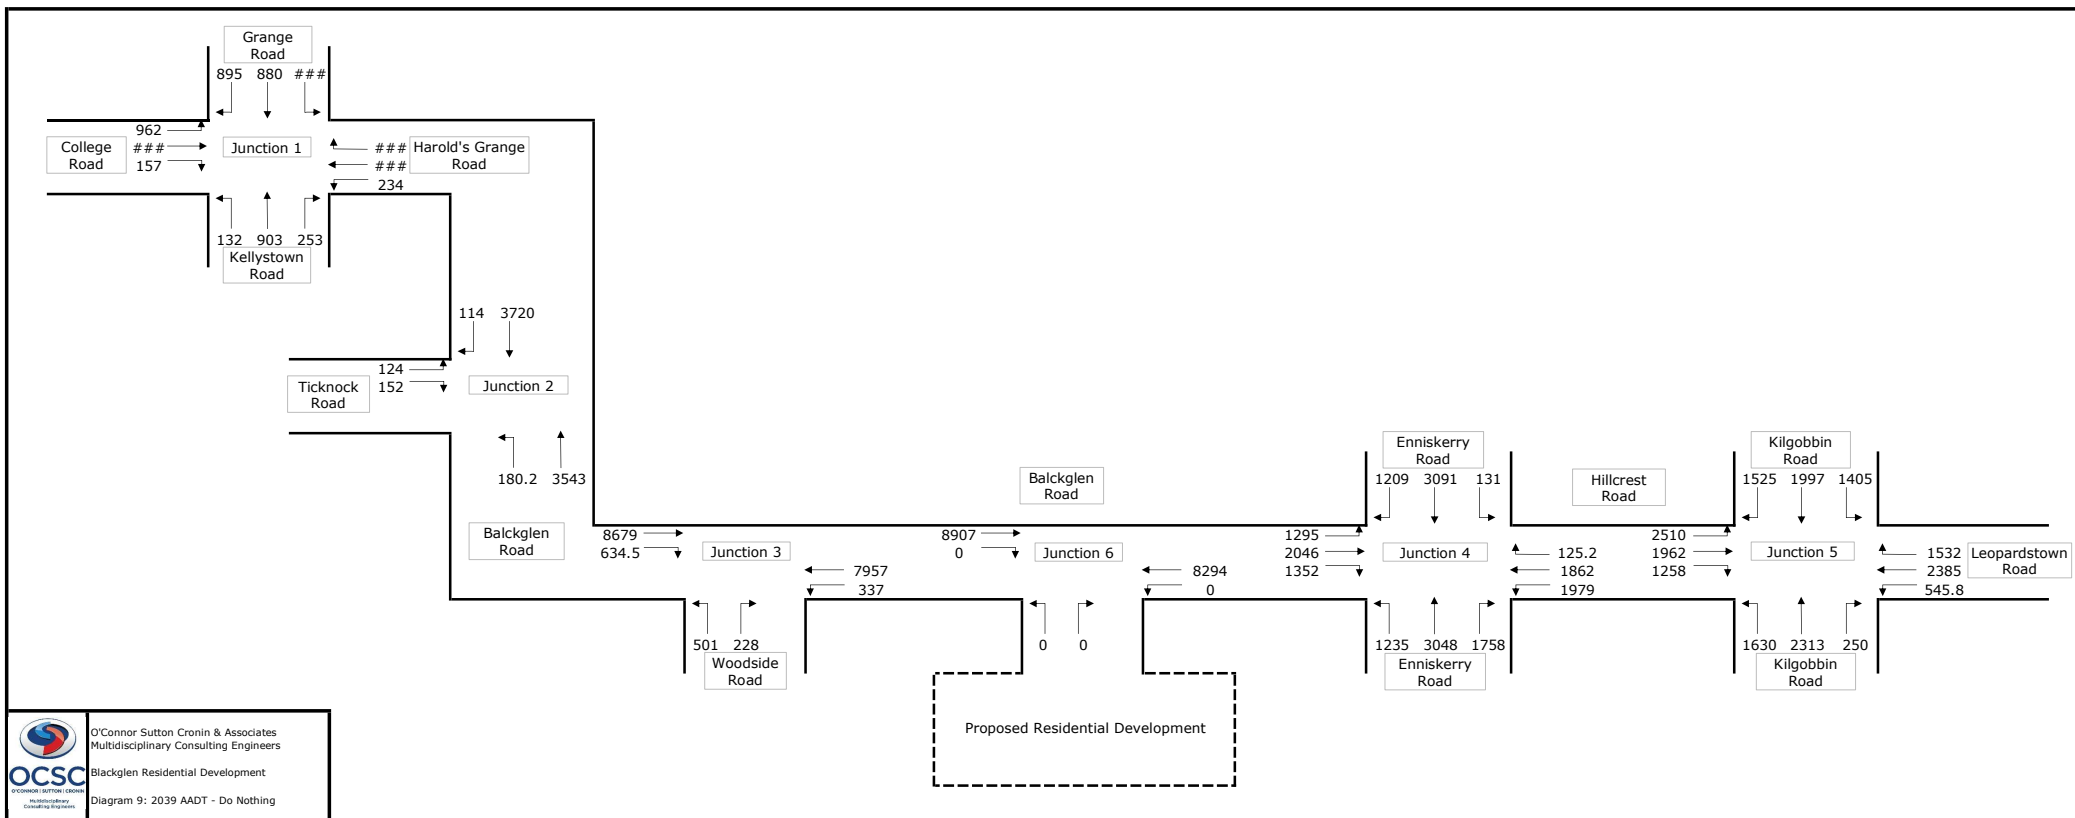

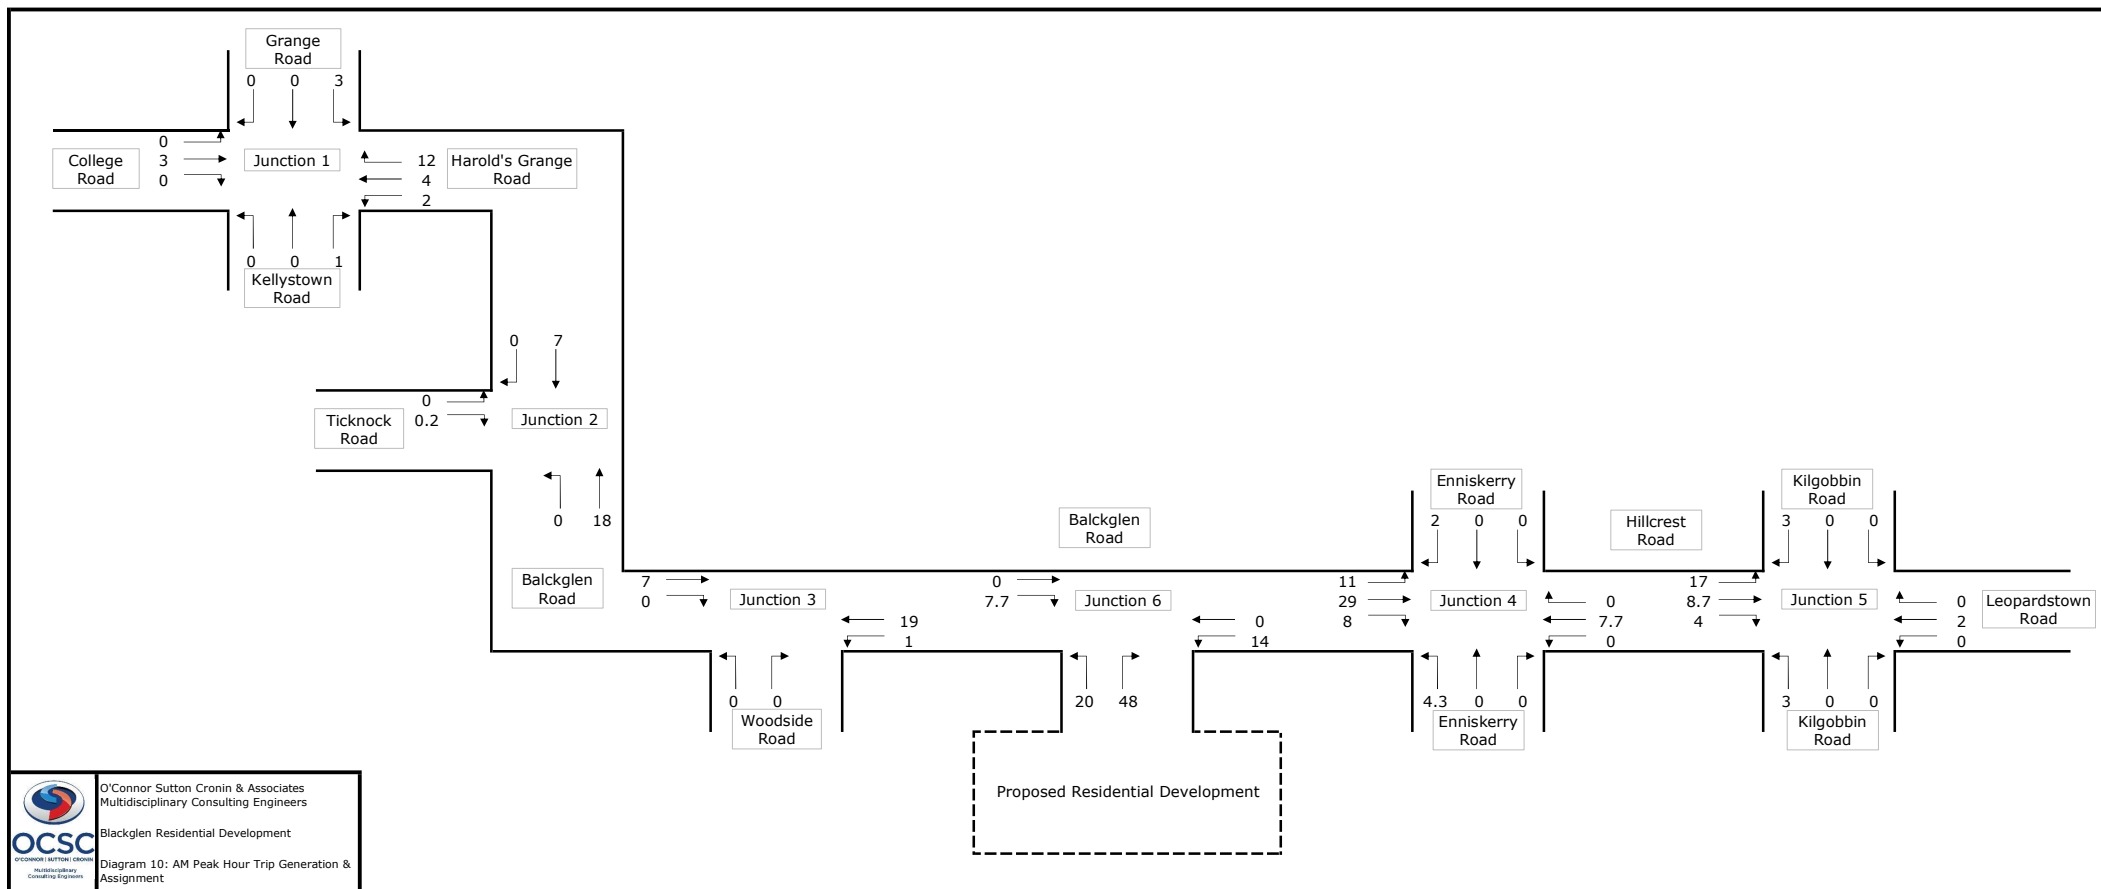

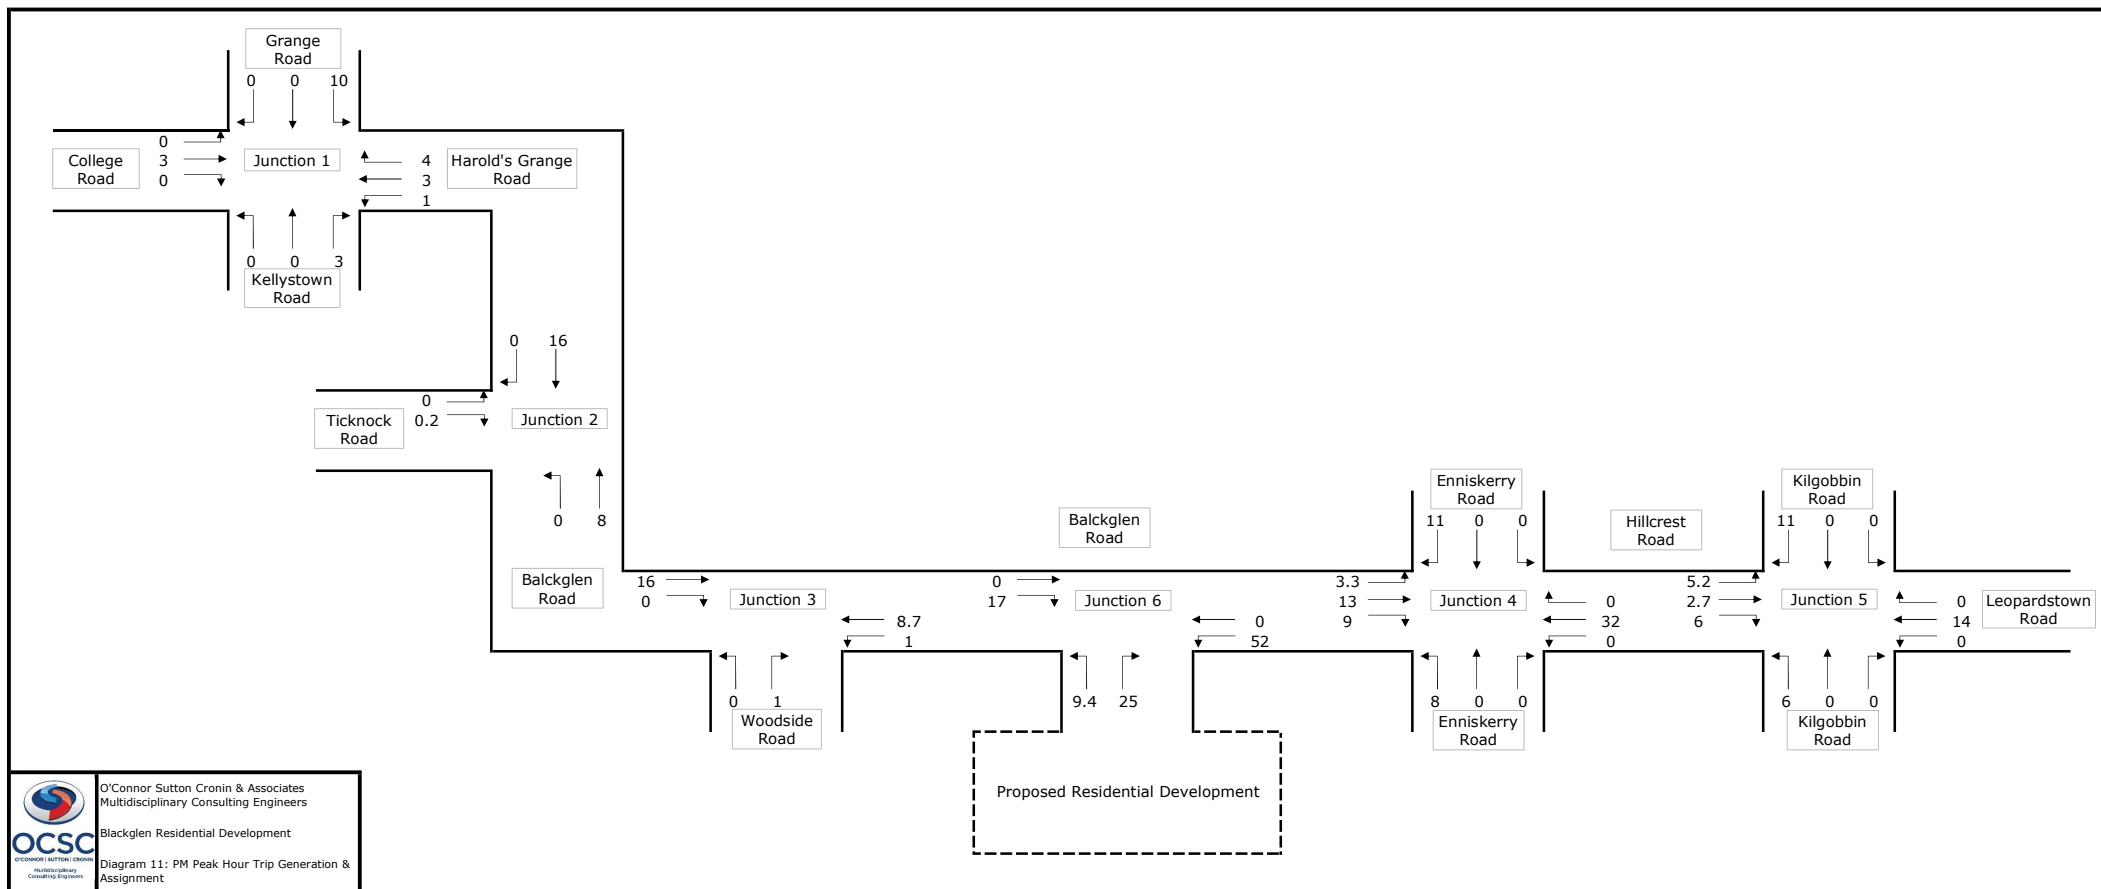

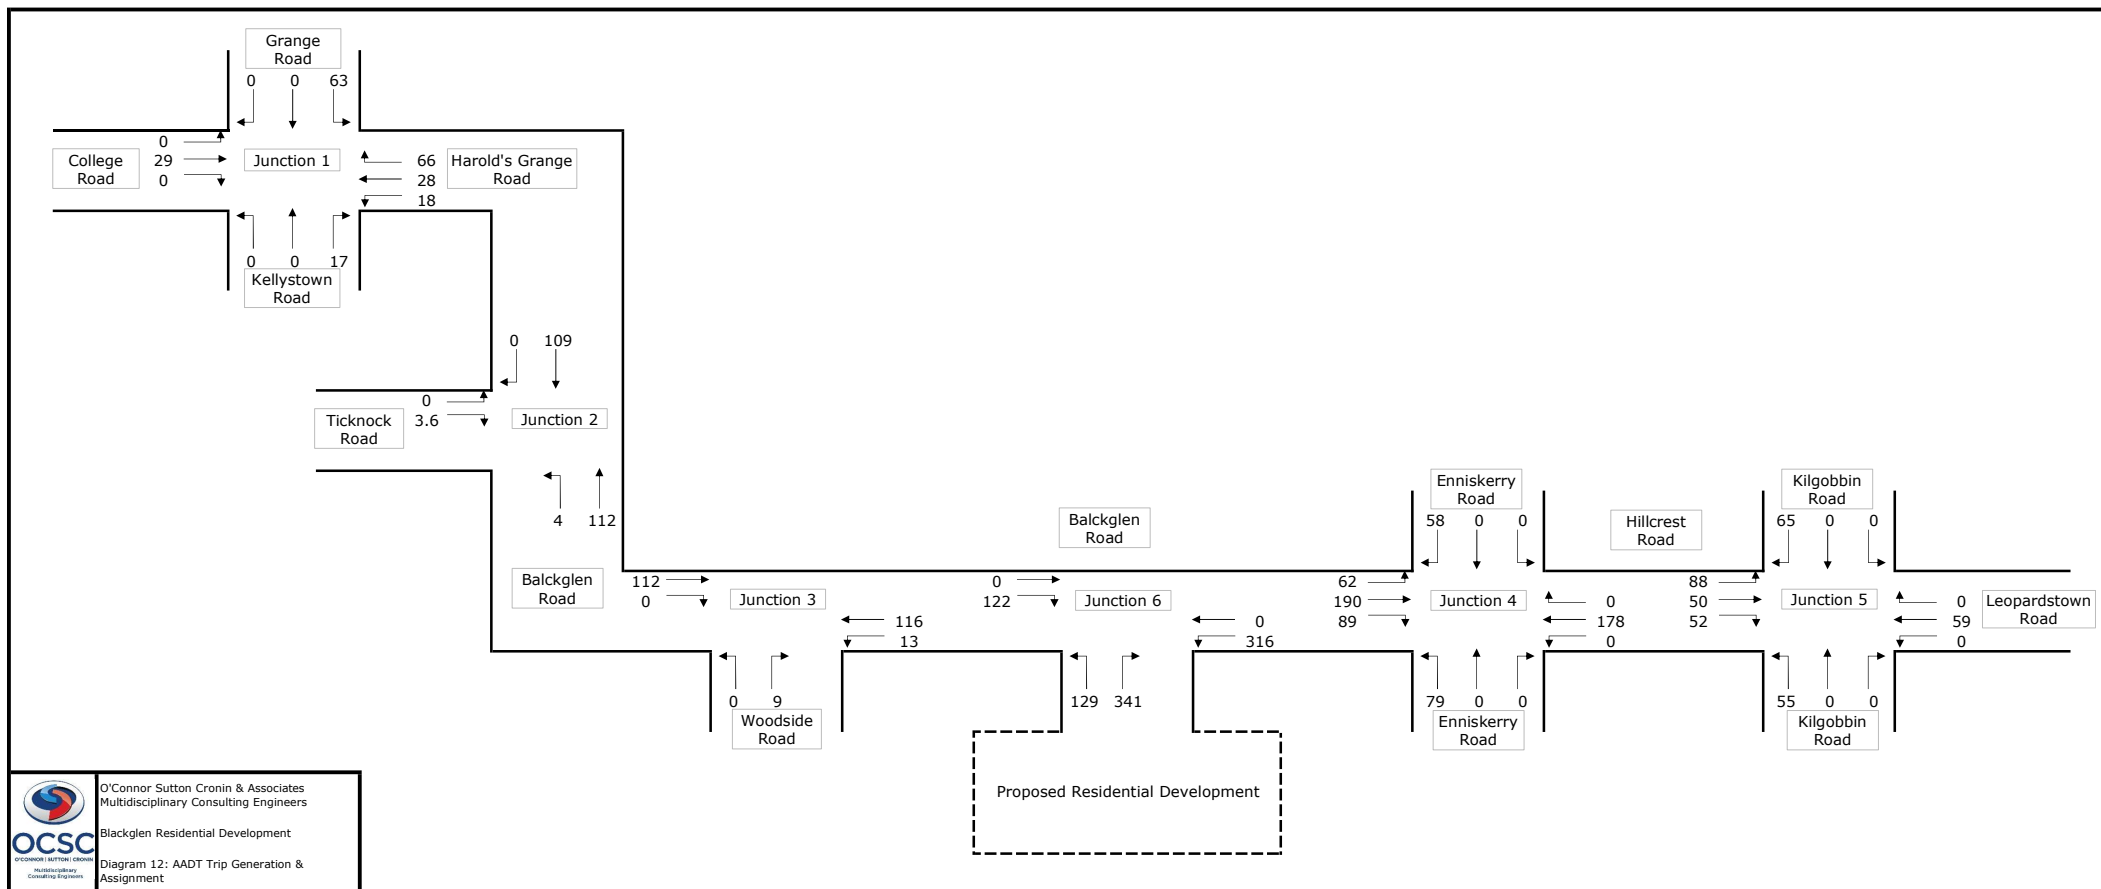

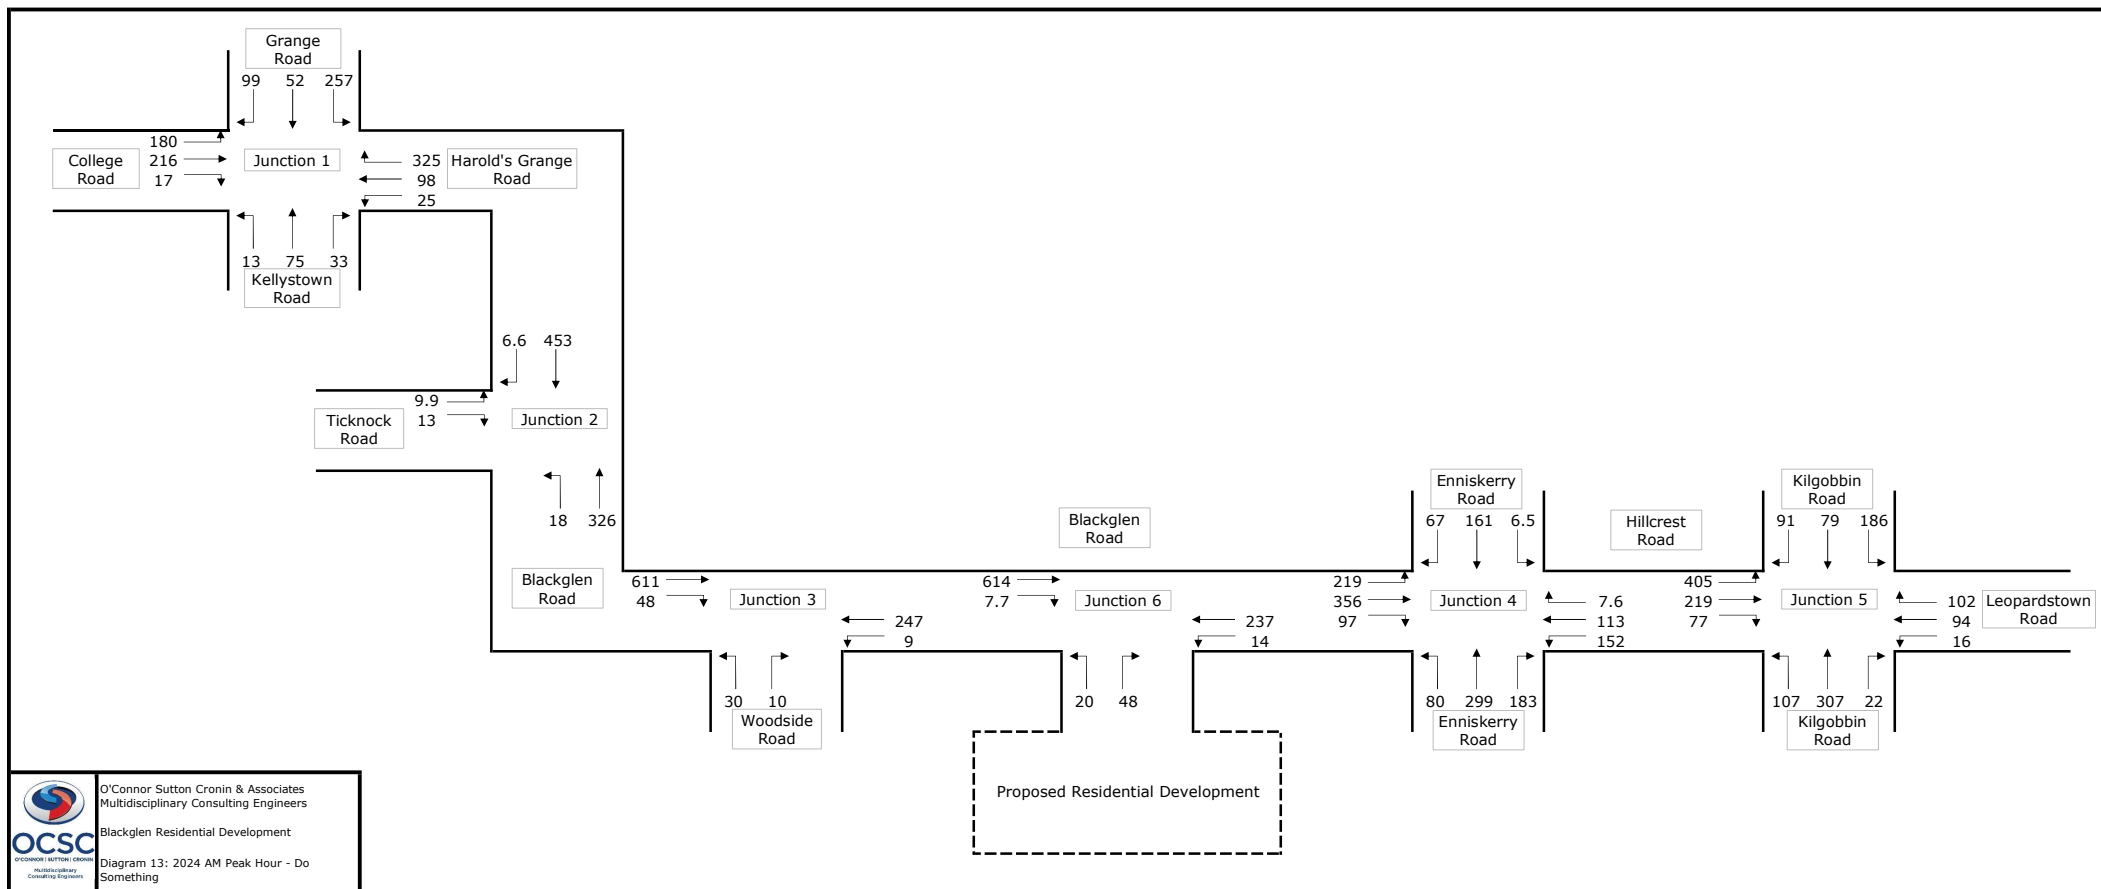

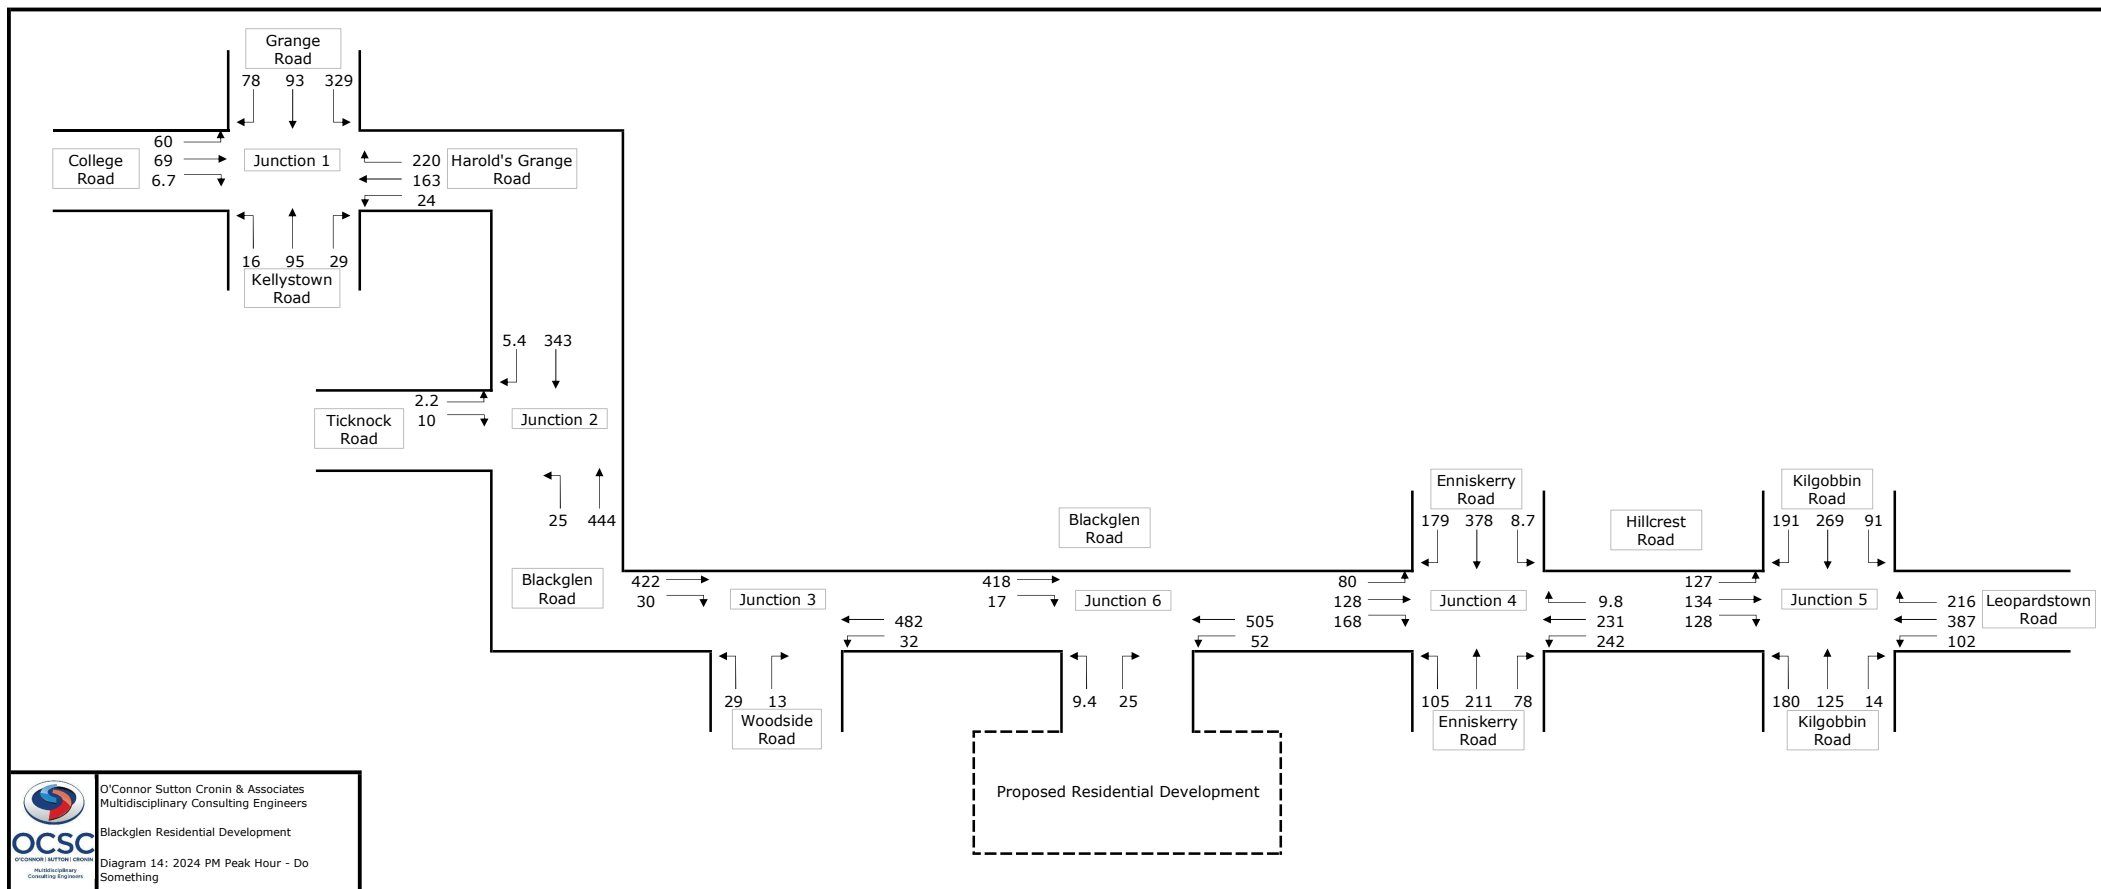

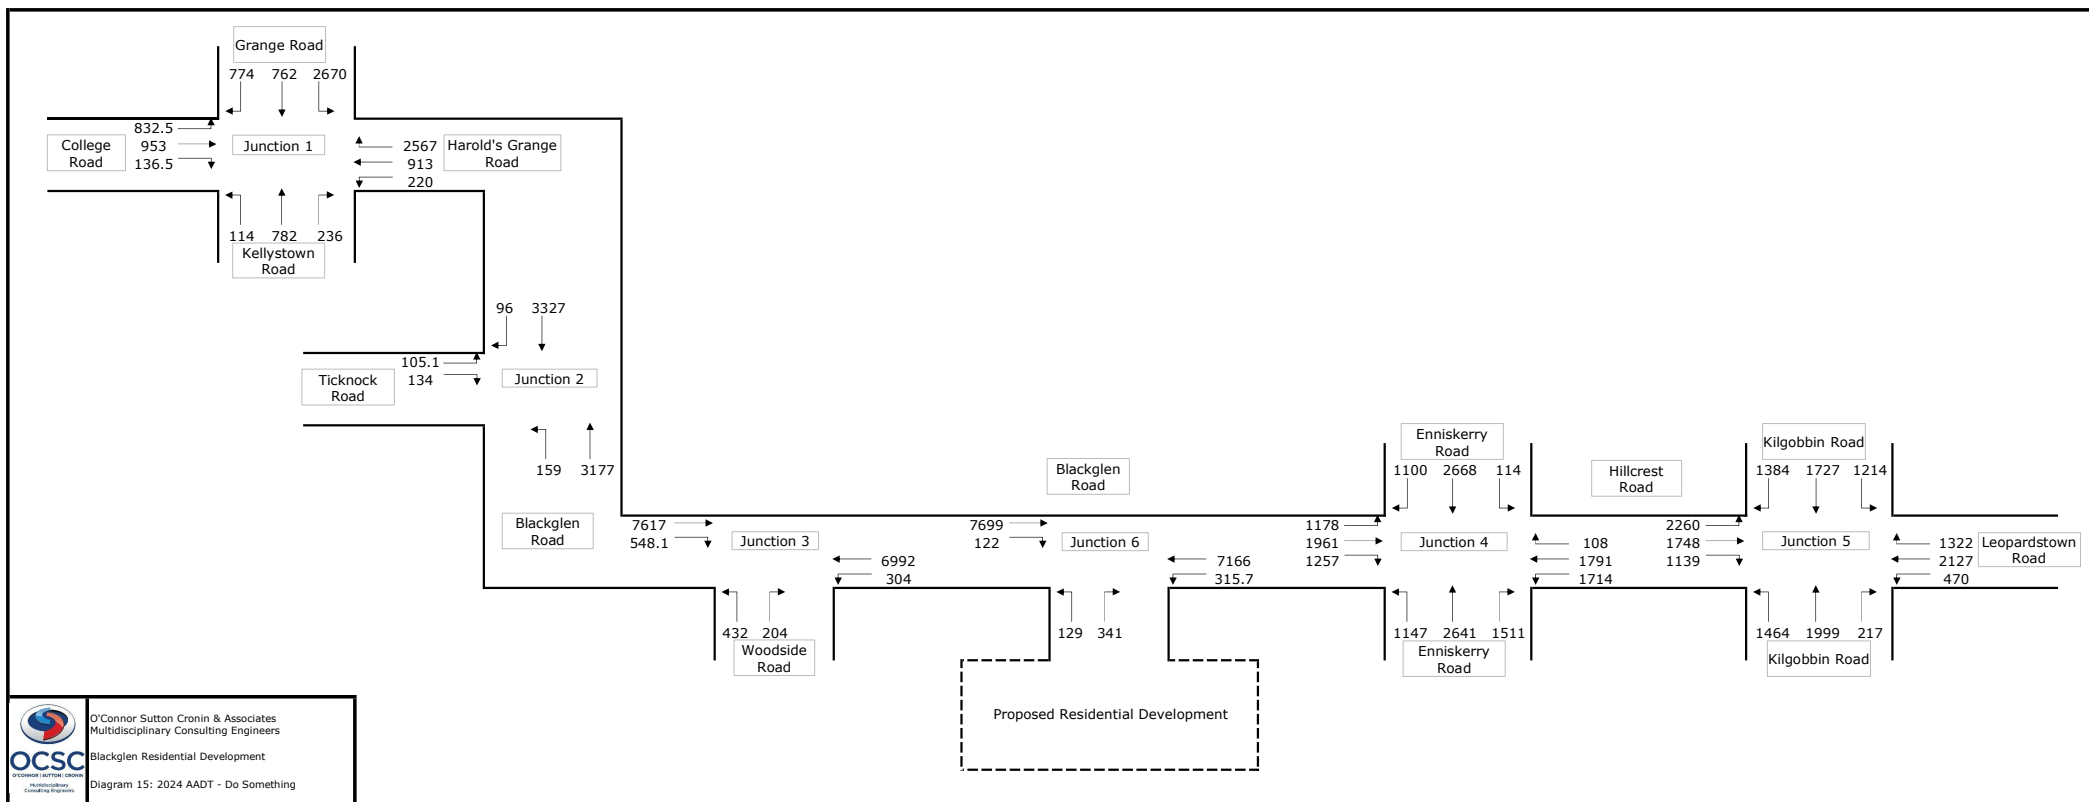

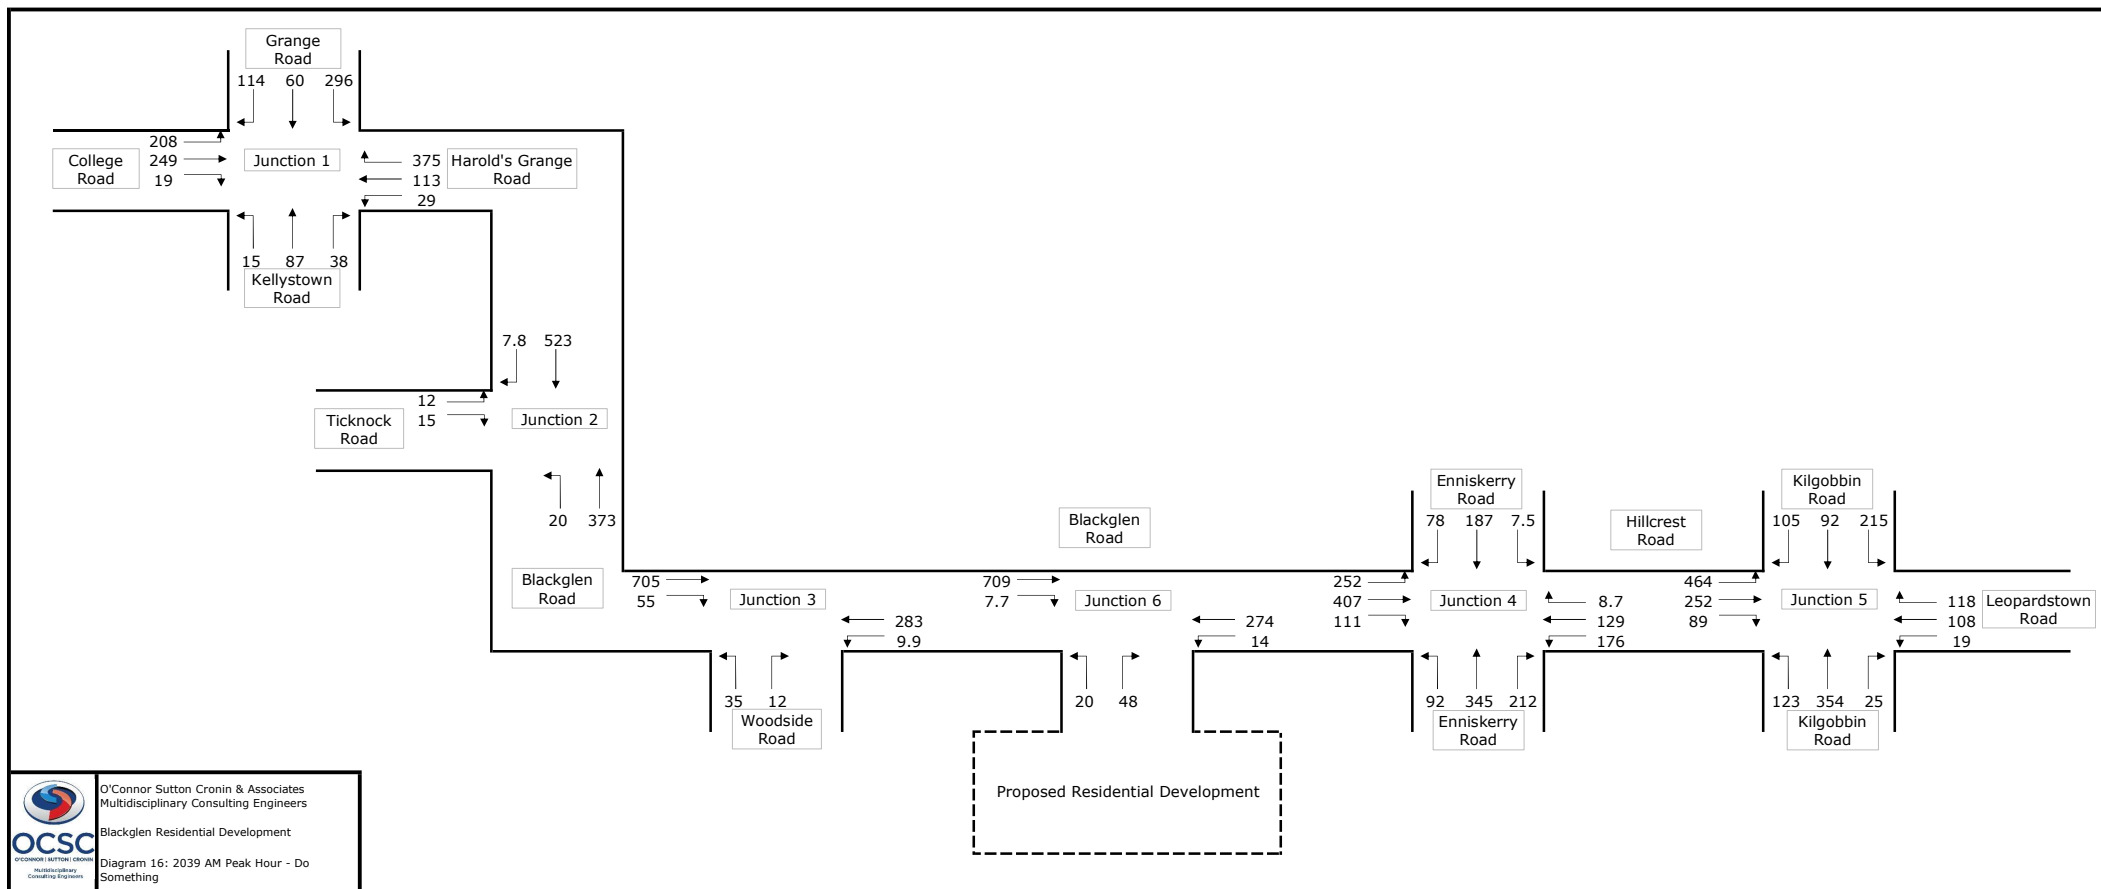

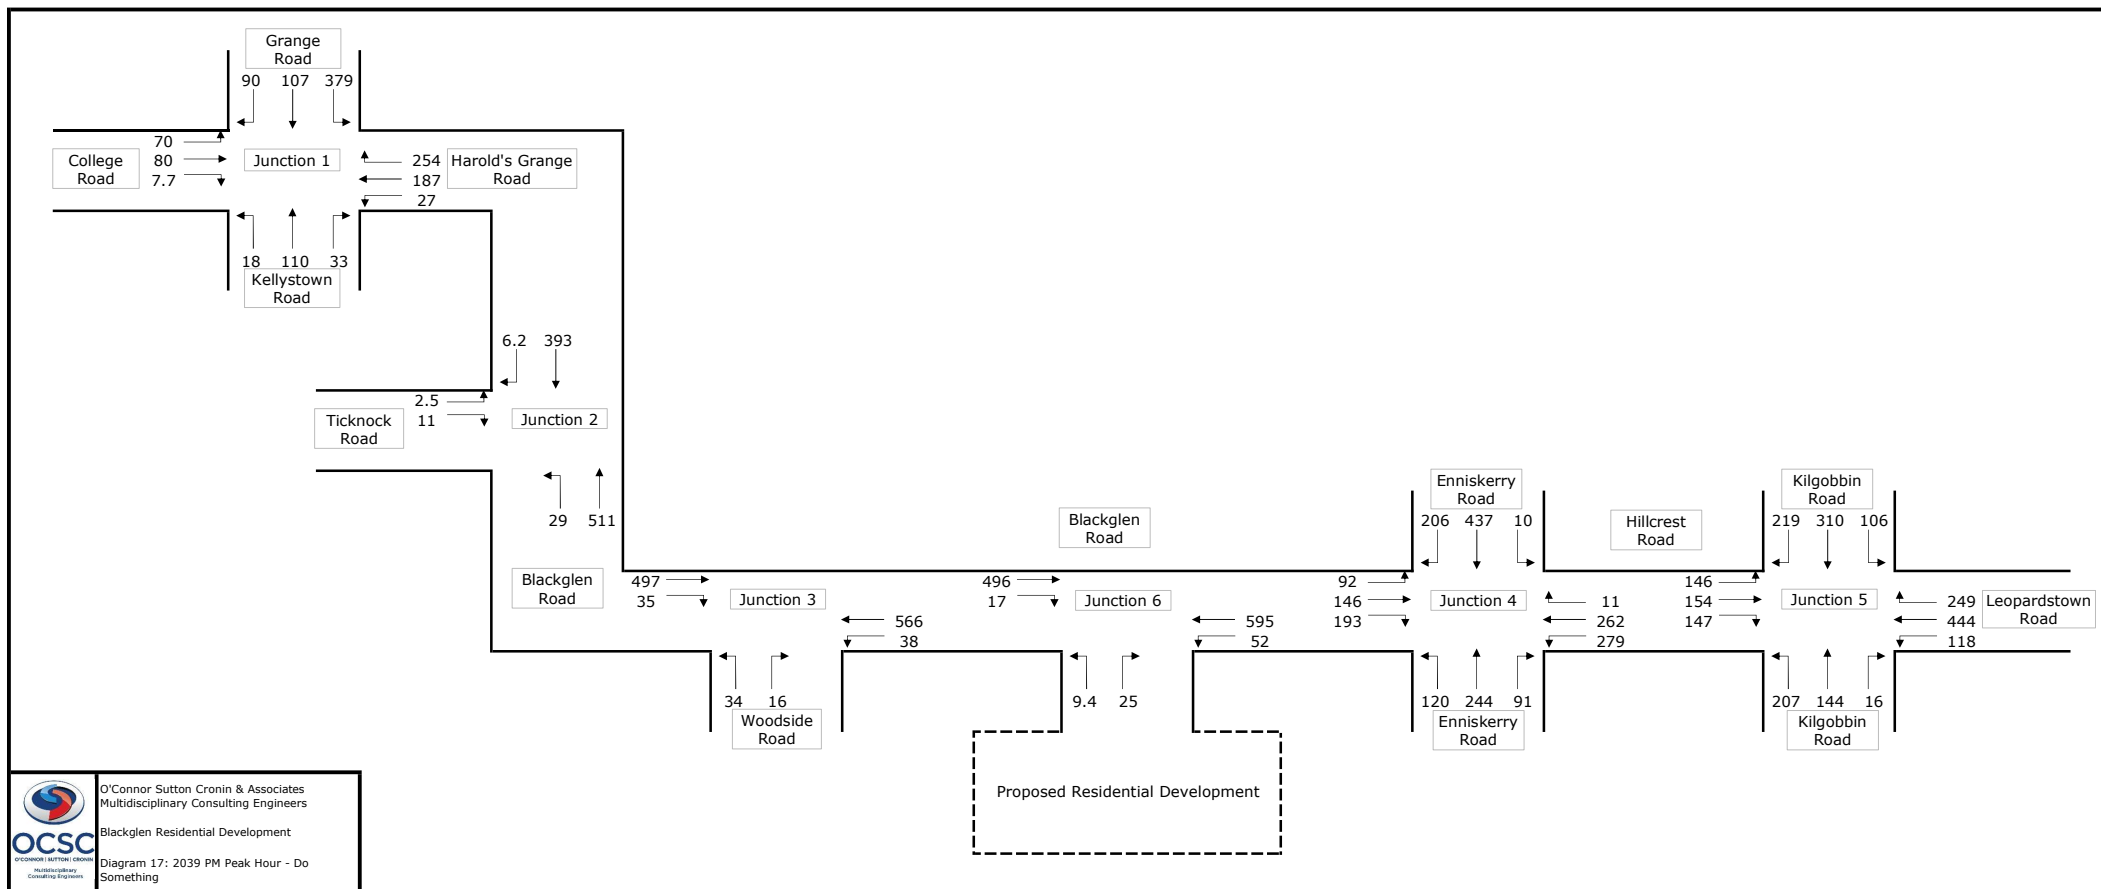

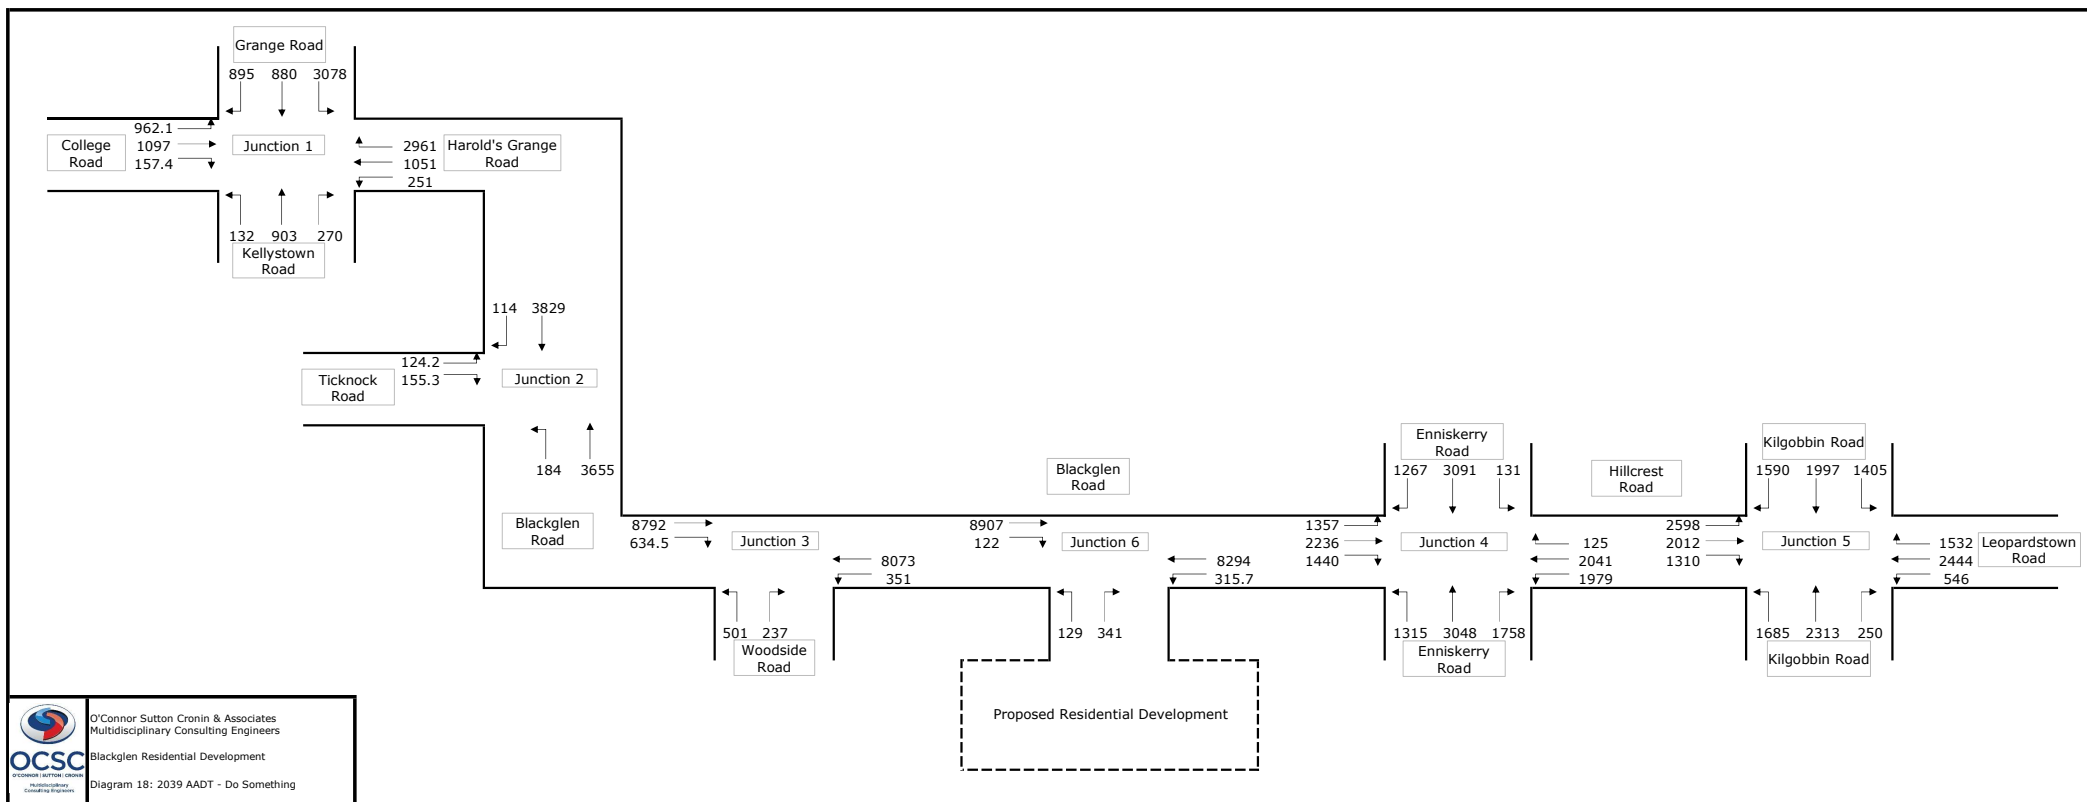

APPENDIX **C**T RICS **O**UTPUT **F**ILES

Calculation Reference: AUDIT-322901-210917-0939

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
 Category : C - FLATS PRIVATELY OWNED
 TOTAL VEHICLES

Selected regions and areas:

04	EAST ANGLIA	
	CA CAMBRIDGESHIRE	1 days
05	EAST MIDLANDS	
	NT NOTTINGHAMSHIRE	2 days
07	YORKSHIRE & NORTH LINCOLNSHIRE	
	RI EAST RIDING OF YORKSHIRE	1 days
08	NORTH WEST	
	MS MERSEYSIDE	1 days
09	NORTH	
	CB CUMBRIA	2 days
11	SCOTLAND	
	SR STIRLING	1 days
12	CONNAUGHT	
	GA GALWAY	1 days
13	MUNSTER	
	WA WATERFORD	1 days
14	LEINSTER	
	LU LOUTH	3 days
16	ULSTER (REPUBLIC OF IRELAND)	
	MG MONAGHAN	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: No of Dwellings
 Actual Range: 9 to 135 (units:)
 Range Selected by User: 6 to 372 (units:)

Parking Spaces Range: All Surveys Included

Parking Spaces per Dwelling Range: All Surveys Included

Bedrooms per Dwelling Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/13 to 23/10/20

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	4 days
Tuesday	5 days
Wednesday	2 days
Thursday	2 days
Friday	1 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	14 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Edge of Town Centre	4
Suburban Area (PPS6 Out of Centre)	7

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Development Zone	1
Residential Zone	7
No Sub Category	6

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

C3	14 days
----	---------

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS@.

Population within 500m Range:

All Surveys Included

Population within 1 mile:

1,001 to 5,000	4 days
5,001 to 10,000	3 days
10,001 to 15,000	2 days
15,001 to 20,000	2 days
20,001 to 25,000	2 days
25,001 to 50,000	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	2 days
25,001 to 50,000	4 days
50,001 to 75,000	4 days
125,001 to 250,000	1 days
250,001 to 500,000	2 days
500,001 or More	1 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	4 days
1.1 to 1.5	10 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	14 days
----	---------

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	14 days
-----------------	---------

This data displays the number of selected surveys with PTAL Ratings.

Covid-19 Restrictions	Yes	At least one survey within the selected data set was undertaken at a time of Covid-19 restrictions
-----------------------	-----	--

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

Total Rates:			1.138			1.215			2.353

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: $COUNT/TRP*FACT$. Trip rates are then rounded to 3 decimal places.

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. The Company authorises those who possess a current TRICS licence to access the TRICS Database and copy the data contained within the TRICS Database for the licence holders' use only. Any resulting copy must retain all copyrights and other proprietary notices, and any disclaimer contained thereon.

Parameter summary

Trip rate parameter range selected:	9 - 135 (units:)
Survey date range:	01/01/13 - 23/10/20
Number of weekdays (Monday-Friday):	14
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	30

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Analysis - 2019, AM

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way		0.34	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	untitled		Major
B	untitled		Minor
C	untitled		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C	7.20			0.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B	One lane plus flare	9.70	5.00	4.00	4.00	4.00	✓	1.00	0	0

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	522	0.090	0.228	0.143	0.326
B-C	650	0.094	0.239	-	-
C-B	574	0.211	0.211	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

Analysis - 2039 DS, PM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

Title	Junction 3
-------	------------

Location	Blackglen/Woodside
Site number	6485
Date	17/09/2021
Version	
Status	
Identifier	
Client	Zolbury Limited
Jobnumber	Z040
Enumerator	OCSC\wian.marais
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	PCU	PCU	perHour	s	-Min	perMin

Analysis Options

Calculate Queue Percentiles	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
		0.85	36.00	20.00

Demand Set Summary

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)

Analysis Set Details

ID	Name	Network flow scaling factor (%)
A1	Analysis	100.000

Analysis - 2019, AM

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way		0.98	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	untitled		Major
B	untitled		Minor
C	untitled		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C	6.60			0.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B	One lane plus flare	9.25	4.40	3.00	3.00	3.00		1.00	0	0

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	463	0.082	0.208	0.131	0.297
B-C	652	0.097	0.246	-	-
C-B	574	0.217	0.217	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

D9	2039 DS	AM	ONE HOUR	08:00	09:30	15
D10	2039 DS	PM	ONE HOUR	17:00	18:30	15

Analysis Set Details

ID	Name	Network flow scaling factor (%)
A1	Analysis	100.000

Analysis - 2024 DS, AM

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way		0.97	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	untitled		Major
B	untitled		Minor
C	untitled		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C	6.00			0.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B	One lane plus flare	6.00	4.00	4.00	4.00	4.00		1.00	0	0

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	528	0.096	0.243	0.153	0.347
B-C	546	0.084	0.212	-	-
C-B	574	0.222	0.222	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Analysis - 2039 DS, PM

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way		0.65	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Traffic Demand

Demand Set Details

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)
D10	2039 DS	PM	ONE HOUR	17:00	18:30	15

Vehicle mix source	PCU Factor for a HV (PCU)
HV Percentages	2.00

Demand overview (Traffic)

Arm	Linked arm	Use O-D data	Average Demand (PCU/hr)	Scaling Factor (%)
A		✓	715	100.000
B		✓	39	100.000
C		✓	585	100.000

Origin-Destination Data
